

Reasons for the proposed tree work at
13 Frogmore Lane, Waterlooville, Hants, PO8 9QN

The following works are proposed:

G1 – Group of 3 Hazels - Re-coppice to around 250mm high.

Trees are untidy, lapsed-coppices that have some deadwood and overlong limbs.

T2 – Decaying Ash – Remove

The tree is severely decayed at the base and has a fallen Oak (T3) resting in its crown.

T3 – Fallen Oak – Remove

T4 - Ash – Crown reduce by 6-8m (or pollarding to 1m if considered acceptable by tree officer).

Multi-stemmed tree (lapsed coppice) has lots of major deadwood and tear out wounds in the crown (which is sparse). A large limb recently fell into the neighbour's rear garden.

T5 – Oak – Tip reduce branches overhanging neighbour's rear garden by 4-5m

The branches significantly overhanging neighbour's rear garden.

T6 – Ash – Remove (asap).

The tree has significant decay at its base (on SW side) and entire lower stem is covered with *Daldinia concentrica* fruiting bodies (signifying dead / decaying wood).

Mitigation planting:

It is proposed to plant 3 x new, standard-sized Silver Birches along the upper ridge to mitigate the loss of T2, T3 and T6

NOTE. Photos are provided; however, it is recommended that the tree officer visits to assess the above tree work.
