## 1 INTRODUCTION

1.1.1 This Parking Survey Technical Note (PSTN) has been prepared by Bright Plan Ltd on behalf of PWP Architects to support a planning application on land adjacent to Cooperative Society, 13 Middle Park Way, Havant. The application proposes the demolition of 8 garages, to be replaced by 4 x 1-bedroom flats. The application site is situated to the rear of commercial/residential properties on the western side of Middle Park Way, as shown in **Figure 1.1**.

**Figure 1.1: Application Site Location**

- 1.1.2 East Hants Traffic Team (EHTT), consulting on behalf of Havant Borough Council (HBC) raised concern with the car-free arrangement proposed for the site, and have subsequently requested a car parking survey be undertaken to ensure any parking demand generated by the proposal can be accommodated on the local road network. Correspondence with EHTT is attached in **Appendix A**.

## 1.2 Existing Conditions

- 1.2.1 The application site is situated on the corner of Middle Park Way and Purbrook Way. A range of local services and amenities are available within walking distance of the site, including local bus stops and Bedhampton railway station.
- 1.2.2 The surrounding roads provide a range of parking opportunities including unrestricted kerb side parking, unrestricted parallel parking bays, and disabled bays. Examples of parking opportunities in the vicinity of the site are shown in **Figure 1.2**.

*Parking Bays on Linkenholt Way*

*Unrestricted Parking on Finchdean Road*

*Parking Bays on Purbrook Way (West)*

*Parking Bays on Purbrook Way (East)*

**Figure 1.2: Parking Opportunities in the Vicinity of the Site**

### 1.3 Parking Requirement

- 1.3.1 Given the size and intended tenure of the proposed units and the site's accessible location, it is expected that demand for parking from new residents will be low.
- 1.3.2 It is intended that the proposal would operate car-free and would be marketed as such. It is however recognised that it would not be possible to prevent residents from bringing vehicles as parking is uncontrolled in the locale.
- 1.3.3 Review of car ownership data from the 2011 census reveals that 1-bedroom flats within local wards typically own 0.44 vehicles per dwelling, meaning the site would generate a parking demand for 2 spaces. Census data is attached at **Appendix B**.
- 1.3.4 However, for the purposes of this assessment, the anticipated car parking demand generated by the proposed development has been robustly based on HBC's parking standards as set out in the council's 'Parking Supplementary Planning Document' (July 2016). A summary of the standards and required provision is shown in **Figure 1.3**.

| Unit Type      | No. of Units | HBC Car Parking Standard | Parking Requirement |
|----------------|--------------|--------------------------|---------------------|
| 1 Bedroom Flat | 4            | 1 space per unit         | 4 spaces            |

**Figure 1.3: Car Parking Standards**

- 1.3.5 As shown in **Figure 1.3**, the development is anticipated to generate a demand for 4 car parking spaces on the local road network.
- 1.3.6 It is worth noting that the existing garages are redundant and that no vehicles would be displaced on to the local road network as a result of the proposed development.

## 2 METHODOLOGY

- 2.1.1 In order to assess the existing on-street parking demand in the vicinity of the site, an independent parking survey has been undertaken by 'Obtrada'. The survey conducted followed the industry standard 'Lambeth' methodology in the mornings of Tuesday 8th and Wednesday 9th February 2022.
- 2.1.2 The 'Lambeth' methodology aims to identify the peak parking conditions for the local area. The survey area includes all feasible on-street parking areas within a 200m walking distance of the application site (c. 2.5 min walk).
- 2.1.3 The surveys were undertaken early in the morning when residents are typically at home and therefore parked on the local road network. Parked vehicle counts were recorded at 01:00am as per the standard 'Lambeth' methodology.
- 2.1.4 The parking counts can be compared to the total capacity in the study area to determine the parking stress as a percentage. The maximum parking capacity was established assuming car parking space dimensions of 5.0m length and 2.0m wide. The PCU size provides a robust estimation of the parking capacity in the survey area, as in reality cars can park at a higher density than this unit allows.
- 2.1.5 In calculating the maximum capacity, care was taken to exclude infeasible parking areas, such as in front of dropped kerbs that serve private driveways. The study area and maximum parking capacity on each road is demonstrated in **Figures 2.1** and **Figure 2.2**. The survey results are attached at **Appendix C**.

**Figure 2.1: Survey Area**

| Location            | Unrestricted | Marked Bays | Disabled | Total Capacity |
|---------------------|--------------|-------------|----------|----------------|
| Middle Park Way     | 11           | -           | -        | 11             |
| Finchdean Road      | 5            | -           | -        | 5              |
| Purbrook Way (West) | -            | 13          | -        | 13             |
| Linkenholt Way      | 3            | 6           | -        | 9              |
| Purbrook Way (East) | -            | 3           | 1        | 3              |
| <b>Total</b>        | <b>19</b>    | <b>22</b>   | <b>1</b> | <b>41</b>      |

**Figure 2.2: Maximum Parking Capacities**

### 3 RESULTS

- 3.1.1 This section summarises the results from the car parking survey, identifying the existing parking stress and the remaining capacity in the study area. The survey measured parking 'stress' as a percentage of the overall spaces occupied by parked vehicles. The average stress over the two surveys days has been used for the analysis.
- 3.1.2 To provide a robust assessment, disabled parking bays have been omitted from stress analysis as these are unlikely to be used by residents. A summary of the survey results is demonstrated in **Figure 3.1**.

| Location            | Capacity  | Car Parked | Available Spaces | Parking Stress |
|---------------------|-----------|------------|------------------|----------------|
| Middle Park Way     | 11        | 0          | 11               | 0%             |
| Finchdean Road      | 5         | 1          | 4                | 20%            |
| Purbrook Way (West) | 13        | 13         | 1                | 96%            |
| Linkenholt Way      | 9         | 2          | 7                | 22%            |
| Purbrook Way (East) | 3         | 1          | 2                | 33%            |
| <b>Total</b>        | <b>41</b> | <b>17</b>  | <b>25</b>        | <b>40.2%</b>   |

**Figure 3.1: Survey Results (2 Day Average) \*Discrepancies due to rounding**

- 3.1.3 The survey revealed an average parking stress of 40.2% across the overall study area equating to 25 remaining parking spaces within a 200m walking distance of the site. It is therefore concluded that the parking demand of up to 4 vehicles generated by the development can be comfortably accommodated on the local road network.
- 3.1.4 It is noted that the survey results for Finchdean Road, and Purbrook Way (west) recorded cars parked across dropped kerbs, or in other locations deemed unsuitable (relating to vehicles parking in front of driveways or on the verges flanking the road). However, it is reasonable to assume that these parking practices are unlikely to change, and as such would not affect the number of spaces available to the proposed development.

## 4 CONCLUSION

- 4.1.1 This Parking Survey Technical Note has been prepared by Bright Plan Ltd on behalf of PWP Architects to support a planning application for a residential development on land adjacent to Cooperative Society, 13 Middle Park Way, Havant. The conclusions from this report are as follows:
- i. The proposed development would involve the demolition of 8 garages to be replaced by 4 x 1-bedroom flats. The development would not provide on-site parking for the units.
  - ii. Based on HBC's parking standards, the proposed development is expected to generate a demand for 4 parking spaces. Although census data suggests demand would in reality be lower.
  - iii. The survey identified an average of 25 available spaces on the local road network, and as such the demand for up to 4 spaces could be comfortably accommodated on the local road network.

## **Appendix A** Correspondence with EHTT

the 1990s, the number of people in the world who are under 15 years of age has increased by 1.2 billion, from 1.1 billion in 1980 to 2.3 billion in 1999. The number of people aged 15 years and over has increased by 1.1 billion, from 1.1 billion in 1980 to 2.2 billion in 1999.

There are a number of reasons why the world population is growing so rapidly. One of the main reasons is that the number of children born to each woman has increased. In 1980, the average woman in the world had 2.5 children. In 1999, the average woman in the world had 2.7 children.

Another reason why the world population is growing so rapidly is that the number of people who are surviving to old age has increased. In 1980, the average person in the world lived for 55 years. In 1999, the average person in the world lived for 65 years.

## **Appendix C** Car Parking Survey Results

OBTRADA

## Methodology

### Residential Developments

The Council requires a parking survey to cover the area where residents of a proposed development may want to park. This generally covers an area of **200m (or a 2 minute walk)** around a site. For further detail see 'Extent of survey' below.

The survey should be undertaken when the highest number of residents are at home, generally late at night during the week. A snapshot survey between the hours of **0030-0530** should be undertaken on two separate weekday nights (**i.e. Monday, Tuesday, Wednesday or Thursday**).

### Additional survey times for all developments

Additional survey times may be necessary where the development site:

- Is a town centre location
- Has regular specific uses close to the site (eg. place of worship, education etc)
- Has commercial uses close to the site
- Is close to railway stations/areas of commuter parking

In the above circumstances, developers should contact the Case Officer for further advice regarding the scope of the parking survey.

Surveys **should not** be undertaken:

- in weeks that include Public Holidays and school holidays, and it is advised that weeks preceding and following holidays should also be avoided;
- on or close to a date when a local event is taking place locally since this may impact the results of the survey.

### Extent of survey

All roads within 200m (or 500m for commercial uses) walking distance of the site. Note this area is **not** a circle with a 200/500m radius but a 200/500m walking distance as measured along all roads up to a point 200/500m from the site.

People searching for a parking space are unlikely to stop halfway along a road at an imaginary 200/500m line so the survey should be extended to the next junction or shortened to the previous one, or taken to a suitable location along a road. Surveys will be assessed based on practical driving routes so advanced confirmation that the extent of a survey is acceptable should be sought.

### The following areas should be **excluded** from surveys:

- If the site is in a CPZ, any parking bays in an adjoining CPZ
- Any CPZ bays within the survey area where the site itself does not fall into a CPZ
- Private roads and housing estate roads
- Places where drivers are unlikely to park, for example:
  - Locations where parking is restricted due to the width of the road or waiting restrictions are in place.
  - Areas that may present highway or personal safety issues, or difficulty in accessing the parking, such as on a major road, in areas with poor surveillance, etc.

Common sense should be applied in all cases and the extent of the survey area and justification for any amendments should be included in the survey. If inadequate justification is provided for a survey area, then amendments may be required or a recommendation for refusal made accordingly.

### Required Information

The following information should be included with the survey results, to be submitted to the Council:

- The date and time of the surveys.
- A description of the area noting any significant land uses in the vicinity of the site that may affect parking within the survey area (eg. places of worship, restaurants, bars and clubs, train stations, hospitals, large offices, town centres etc.).
- All areas excluded from the survey with an explanation why they have been excluded.
- Any unusual observations, e.g. suspended parking bays, spaces out of use because of road works or presence of skips, etc.
- A drawing (preferably scaled at 1:1250) showing the site location and extent of the survey area. All other parking and waiting restrictions such as Double Yellow Lines and Double Red Lines, bus lay-bys, kerb build-outs, and crossovers (vehicular accesses) etc. should also be shown on the plan.
- The number of cars parked on each road within the survey area on each night should be counted and recorded in a table as shown below. It would be helpful to note the approximate location of each car on the plan (marked with an X).
- Photographs of the parking conditions in the survey area can be provided to back-up the results. If submitted, the location of each photograph should be clearly marked.

## Methodology

### Areas Not in A Controlled Parking Zone (CPZ)

All areas of unrestricted parking should be counted. To calculate parking capacity each length of road between obstructions (such as crossovers, kerb build-outs, yellow lines, bike hangars etc) must be measured and then converted into parking spaces by dividing the length by 5 and rounding down to the nearest whole number.

Example 1: a road has a lot of driveways that restrict the amount of kerb space available for on-street parking. The length of kerb between the first two driveways may measure 8m. This would only provide 1 parking bay ( $8/5=1.6=1$ ). The distance to the next driveway may be 12m which would provide 2 spaces ( $12/5=2.4=2$ ). This calculation would have to be done for every length of road between every driveway. To provide the total amount of kerb space available for on-street parking.

Example 2: a road has a series of kerb build-outs. The distance between the first two measures 47m in length which would provide 9 parking bays ( $47/5=9.4=9$ ). The capacity of each separate section of road between build-outs must be calculated separately and then added together to give a total number of parking spaces for each road in the survey area.

For reasons of highway safety, the first 5m from a junction should also be omitted from the calculation. A map or plan showing the measurements used in calculating parking capacity should be supplied so that this can be verified by the Council. The parking survey may not be accepted if this is not supplied.

## Residential Lambeth Survey

Address: **Middle Park Way, Leigh Park**

Survey Dates: **08/02/2022 and 09/02/2022**

Prior to services commencing

- Satellite mapping of the location is to be viewed to understand the extent of the survey.
- Plans and drawings for conducting the services must be completed
- Risk assessment to be formulated.

## Site Observations

Date: 08/02/2022 and 09/02/2022

Middle Park Way - No parking seems to take place as this is a busy main road where people would have to park physically on the street.

Finchdean Road - Road is not wide enough to park on both side of the street. There is more availability on the southern side of the road.

Purbrook Way (West) - Plenty of parking wherever seems available, whether blocking an access or squeezed into a space.

Linkenholt Way - None

Park Lane - None

Purbrook Way (East) - None

## Survey Extent

Distances along a road are either recuded or increased to meet a suitable end.

Survey Extents

Kerb length for each section details the total meterage of parking.

For the purposes of calculating parking stress, it is assumed that each vehicle measures 5m in length.

The kerb length of parking on a given road may not represent the total number of spaces. For example a section of unrestricted parking may be measured at 4.5m and another section measured at 5.5m totaling 10m in this scenario there is only 1 available space.
