

Proposed 15M Mast at St Johns Ave - Purbrook - app ref APP/22/471

Dear Sir.

I live very near the proposed site of the 50ft communication mast - my objections are

- The noise generated by the control cabinet cooling fans will be a total intrusion.
- The proposed mast equipment will appear very industrial for the proposed location, and will not be compatible with the area.
- If the proposal is granted permission - it may encourage other types of installations
- The proposed size of the mast will overwhelm the local bungalows and change forever the aspects of the area.
- The installation process will totally disrupt the local environment.
- The installation of the mast in such an area will definitely have a negative effect on the local housing values.
- The numerous negative health and environmental concerns that such an installation close to a residential area could be realised.

- There are many alternatives' sites to accommodate such a structure
- Waste land near Fort Purbrook. - Southdown's College carpark area's - Various locations on Crookhorn golf course.
- Incorporate the mast in the new retail development near BQ
- Upgrade existing mast with new technology.

I think the council should engage with the residents of the local area and undertake a survey so that residents views are taken into account and factored in to the application.
