Dear Lewis,

I have just finished speaking to our proposed installer who confirmed that the PV panels will protrude 120mm above the tile of the barn roof. That is made up of 40mm of PV panel and 80mm of air gap. This is the most efficient and secure way to install the panels, apparently. We are of course eager to proceed in the light of increasing energy bills and do our bit for the planet.

We are away from home at the moment but I can be contacted by mobile to discuss our options further. My mobile number is [Redacted]. I am also on Whats App if you would like to text that way as well.

Many thanks

Steve Cockerill

Subject: RE: APP/22/00426 - 1 Old Barn Gardens, Waterloooville, PO8 9XL

Dear Mr & Mrs Cockerill,

As stated in my previous email below (dated 19 July), I visited your property yesterday morning (Tuesday 02 August 2022) just before 11:00am. I did knock on your door - but unfortunately you were not in – and I did briefly speak with your neighbour at No.3 who I believe wanted to know what I was doing in the area.

Following the site visit, I note that the existing barn is next to No.143 Lovedean Lane (which is a building of local interest), and I believe that the existing barn itself may be a non-designated heritage asset. Due to the above, **I have formally consulted the HBC Heritage Team** for their views on the installation of 18no. solar PV panels on the south-facing roof slope of the existing barn. So that the heritage team can consider your proposal, may I please ask **how the proposed PV panels will be attached to, and how far they will project from, the existing roof slope?**

Thank you very much and I look forward to your reply.

Kind Regards

Lewis
