Tree statement

The trees won't be affected by the proposed planning application.
I can confirm that the proposed works won't damage the trees and materials won't be stored near them, if necessary, fencing can always be used.
When we are digging for the concrete pads, we would be very careful, trail pads/ trenches could be used, if we were to find tree roots, we would be sure to put a membrane / protective barrier when covering the roots to give extra protection. 123v PLC is used to this kind of work, we have adhered to 100's of building regulations and planning applications and pride ourselves with the installation, by using our own inhouse trained teams, we never use a 3rd party installer.

It is my opinion that the trees identified for retention can be afforded due respect and provided adequate protection with special precautions, ensuring their safe and healthy retention during the construction process.
