Dear Tina

Planning consultation: Erection of purpose built balcony approx. 6m long (along face of building) by 2m wide (extending from face of building), positioned on the south elevation

Location: 90a Southwood Rd, Hayling Island PO11 9QF

Thank you for your consultation on the above dated 08 June 2021.

Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development.

No objection subject to mitigation

The site is located adjacent to the Solent and Dorset Coast Special Protection Area and the Solent Maritime Special Area of Conservation. The proposals have the potential to affect SPA functional land, which forms part of a network of terrestrial sites located outside of the Solent SPAs boundaries used by SPA species (including qualifying features and assemblage species) as alternative areas for roosting and foraging. These sites support the functionality of the designated sites and are therefore protected in this context.

The site affected C19 is classed as a Primary Support Area and supports high numbers of sanderling and ringed plover

Natural England advises that a Construction Environmental Management Plan (CEMP) should be submitted to and approved in writing by the district ecologist that identifies the steps and procedures that will be implemented to avoid or mitigate constructional impacts on the adjacent Chichester and Langstone Harbours SPA, Ramsar and the SPA's functional land mentioned above.

The CEMP should address the following impacts:

- Noise/visual/vibrational impacts
- Visual screening (for SPA birds)
- Storage of construction materials/chemicals and equipment;
- Dust suppression
- Chemical and/or fuel run-off from construction into designated sites
- Waste disposal.

The CEMP should ensure there is no percussive piling or works with heavy machinery (i.e. plant resulting in a noise level in excess of 69dbAmax – measured at the sensitive receptor) to be

undertaken during the bird overwintering period (i.e. October to March inclusive). The sensitive receptor is the nearest point of the SPA or any SPA supporting habitat (e.g. high tide roosting site).

This detail should be included in the Appropriate Assessment to ensure there is no adverse impact from the construction work on the adjacent designated sites and its functional land.

Should the developer wish to discuss the detail of measures to mitigate the effects described above with Natural England, we recommend that they seek advice through our [Discretionary Advice Service](#).

If you have any queries relating to the advice in this letter please contact me on 07500 954264.

Should the proposal change, please consult us again.

Yours sincerely

Rachael Clemson
