

Isn't it ironic that the same week that Barrett sponsor the beach clean up (with a rather symbolic 100 GBP), their workers leave all trash from their building work and their lunches scattered all over the field?

There were various ripped open, full bags of cement scattered over the Core Support Area for Brent Geese and Waders). Especially disappointing as cement is classified as hazardous waste (waste code: 17-09-03*).

The same has been happening at the South side of the field.

Is this what we can expect for the coming years? The recent farming activity has covered up whatever local residents couldn't clean up. Neatly ploughing it all in to the field.
