Dear sirs

I have highlighted to the best of my ability where I foresee the Acer and Oak in question being pruned to.

The Oak is approximately 15m in height, we will be looking to leave the tree no less than 13m in height by selecting individual branches to create a balanced canopy appearance. These branches will be pruned to adequate growth points. Deadwood will also be removed in the process.

The Acer to the front of the property is to be pruned to allow for the clearance from the road, to avoid vehicle strike. This will involve a reduction on the road side and a crown raise as specified in the application. The remaining canopy will be pruned to allow for this and to create an overall balanced appearance. Please see photo attached for a foreseeable shape. All cuts will be to a suitable growth point with the retention and longevity of the tree being paramount.

All our work is carried out to the industries best practices in accordance with BS 3998. We would be happy to provide before and after photos on request.

Kind Regards
Stephanie Smith
