

Habitats Regulations Assessment (HRA) Screening and Appropriate Assessment (AA)

PLEASE NOTE: Undertaking the HRA process is the responsibility of Havant Borough Council as the Competent Authority for the purpose of the Habitats Regulations. However, it is the responsibility of the applicant to provide the Competent Authority with the information that they require for this purpose.

HRA drafting date:	26/08/2021
HRA completion date:	4/10/2021
Application reference:	APP/20/01014
Application address:	1 – 3 Beech Grove, Hayling Island, PO11 9DP
Application description:	Single storey rear extension for 3 additional bedrooms, with an increase in residents from 34 to 36.
Lead Planning Officer:	Graham Speller
Please note that all references in this assessment to the 'Habitats Regulations' refer to The Conservation of Habitats and Species Regulations 2017 (as amended).	

Stage 1 - details of the plan or project

European site potentially impacted by planning application, plan or project:	▪ Chichester & Langstone Harbours Special Protection Area (SPA) ▪ Chichester & Langstone Harbours Ramsar site ▪ Solent Maritime Special Area of Conservation (SAC) ▪ Solent and Dorset Coast Special Protection Area (SPA) ▪ Solent and Southampton Water SPA ▪ Solent and Southampton Water Ramsar ▪ Portsmouth Harbour SPA ▪ Portsmouth Harbour Ramsar ▪ Solent and Isle of Wight Lagoons SAC (Hereafter known as the Solent European Sites)
Is the planning application directly connected with or necessary to the management of the site (if yes, Applicant should have provided details)?	No. The development consists of an increase in residential dwellings, which is neither connected to nor necessary to the management of any European site.
Are there any other projects or plans that together with the planning application being assessed could affect the site?	Yes. All new housing development within 5.6km of the Solent SPAs is considered to contribute towards an impact on site integrity in combination with other development in the Solent area due to increase in recreational pressure. All new housing development that would drain to the Budds Farm or Thornham Wastewater Treatment

	Works due to increase in nitrogen deposition leading to a reduction in water quality. The PUSH Spatial Position Statement (https://www.push.gov.uk/work/planning-and-infrastructure/push-position-statement/) sets out the scale and distribution of housebuilding which is being planned for across South Hampshire.
--	---

Stage 2 - HRA screening assessment

Screening under Regulation 63(1)(a) of the Habitats Regulations – The Applicant to provide evidence so that a judgement can be made as to whether there could be any potential significant impacts of the development on the integrity of the SPA/SAC/Ramsar.

Recreational Pressure

The proposed development is within 5.6km of Chichester & Langstone Harbours SPA/Ramsar. In accordance with advice from Natural England and as detailed in Policy DM24 of the adopted Havant Borough Local Plan (Allocations), Policy E16 of the Pre-Submission Havant Borough Local Plan and the Solent Recreation Mitigation Strategy, a net increase in housing development within 5.6km of the Solent SPAs is likely to result in impacts to the integrity of those sites through a consequent increase in recreational disturbance.

Development within the 5.6km zone will increase the human population at the coast and thus increase the level of recreation and disturbance of bird species. The impacts of recreational disturbance (both at the site-scale and in combination with other development in the Solent area) are analogous to impacts from direct habitat loss as recreation can cause important habitat to be unavailable for use (the habitat is functionally lost, either permanently or for a defined period). Birds can be displaced by human recreational activities (terrestrial and water-based) and use valuable resources in finding suitable areas in which to rest and feed undisturbed. Ultimately, the impacts of recreational disturbance can be such that they affect the status and distribution of key bird species and therefore act against the stated conservation objectives of the Chichester and Langstone Harbour SPA and Ramsar sites.

The SRMS in paragraph 6.9 outlines that:

The need for mitigation for the recreational impact of other types of residential accommodation will be assessed on a case-by-case basis by the local planning authority. The key 'test' is based around the likelihood of the proposed development generating additional recreational visits to the SPA(s). For example, in respect of residential accommodation designed specifically for elderly people, a developer contribution (or bespoke mitigation) will be required for apartments for the active elderly, but not for secure accommodation such as a residential nursing home for people who are unable to independently leave that accommodation and which does not provide residents parking or allow pets (this would also apply to people living with conditions that limit their mobility). However, mitigation may be required for any staff living on-site. Retirement properties designed for independent living with parking provision and which allow pets will be treated the same as C3 residential properties.

The proposed development would result in an additional 2 residents at an existing residential care home for the elderly (Blossom House) (C2 use) which specialises in care for people with dementia and other specialist care categories and provides 24 hour residential. As such these residents are unlikely to generate additional recreational trips to the SPA(s).

For the above reasons, the development does not require mitigation through the Solent Recreation Mitigation Strategy (SRMS).

Water Quality

The proposed development is within the catchment of a wastewater treatment works that would drain into the Chichester and Langstone Harbours SPA.

Natural England advises that there is a likely significant effect on the Solent European Sites due to the increase in wastewater from the new housing as a result of the Havant Borough Local Plan. Natural England also advises that any development proposed through any planning application providing overnight accommodation which would discharge into the Solent would be likely to cause a significant effect as there is uncertainty as to whether the increase in waste water from new housing in the Solent catchment will have an adverse effect on the Solent's European Sites.

Natural England advise that there is existing evidence of high levels of nitrogen and phosphorus in the Solent water environment with evidence of eutrophication at some designated sites. This causes eutrophication, which affects vegetation growth and food resources for qualifying species such that it affects the status and distribution of those species and therefore act against the stated conservation objectives of the Chichester and Langstone Harbour SPA and Ramsar sites. The Partnership for South Hampshire (PfSH), Natural England (NE), and Environment Agency (EA) have been jointly working to develop an Integrated Water Management Strategy (IWMS). This examines the potential for the PfSH region to accommodate future housing growth without having a detrimental effect upon the water environment. There is currently uncertainty as to whether there is sufficient capacity to accommodate the new housing growth.

Natural England recommends that any new proposals which include overnight accommodation have inevitable wastewater implications. These implications, and all other matters capable of having a significant effect on designated sites in the Solent, must be addressed in the ways required by Regulation 63 of the Habitats Regulations. Nonetheless, the existing use of the site can be taken into account and it is the 'net' nutrient emissions into European Sites that is critical.

This would need to be examined within an appropriate assessment and that the existing nutrient and conservation status of the receiving waters be taken into account.

As a result, there would be a likely significant effect to the following Solent European Sites due to water quality:

- Chichester & Langstone Harbours Special Protection Area (SPA)
- Chichester & Langstone Harbours Ramsar site
- Solent Maritime Special Area of Conservation (SAC)
- Solent and Dorset Coast Special Protection Area (SPA)
- Solent and Southampton Water SPA
- Solent and Southampton Water Ramsar
- Portsmouth Harbour SPA
- Portsmouth Harbour Ramsar
- Solent and Isle of Wight Lagoons SAC

Would the proposal lead to a likely significant effect on European site integrity? Yes, due to water quality.

(If yes, continue to Stage 3).

Stage 3 - Appropriate Assessment

Appropriate Assessment under Regulation 63(1) - if there are any potential significant impacts, the applicant must provide evidence showing avoidance and/or mitigation measures to allow an Assessment to be made. The Applicant must also provide details which demonstrate any long-term management, maintenance and funding of any solution.

Water Quality

The project being assessed would result in an increase in population in the catchment of several Solent European Sites as set out in stage 2. As advised by Natural England, a permanent significant effect on the Solent European Sites due to the decrease in water quality as a result of new development, is likely. As such, in order to lawfully be permitted, further assessment is needed as to the net nutrient emissions from the site, including any avoidance or mitigation measures proposed.

Havant Borough Council has published a Position Statement and Mitigation Plan for Nutrient Neutral Development. This sets out how mitigation can be provided to enable development to take place within

Havant Borough whilst avoiding any likelihood of a significant effect on the Solent European Sites identified in stage 2.

Natural England have produced 'Advice on achieving nutrient neutrality for new development in the Solent region. This sets out a methodology to calculate the nutrient emissions from a development site. The applicant has used this methodology to calculate the nutrient emissions from the site. This calculation has confirmed that the site will emit a nutrient load into any European Sites. The calculations for this development site are part of the application case file.

Achieving a position where there are no net nutrient emissions into the Solent European Sites from this development involves the use of a specific on-site avoidance measure as well as the use of Warblington Farm as a specific off-site mitigation measure. The scientific report 'Review of the Warblington Farm Mitigation Option for Nutrient Neutral Development in the Havant Borough' is available at www.havant.gov.uk/nitrogen which confirms suitability of the use of Warblington for nutrient mitigation to mitigate for development in Havant Borough.

As set out in the Position Statement and Mitigation Plan for Nutrient Neutral Development, an appropriate scale of mitigation for this scheme would be:

Amount of mitigation required kg/N ¹	Cost of mitigation
0.65	£805.41
Administration Fee ²	£23.00
Total avoidance and mitigation package for nutrient neutrality:	£828.41
¹ Please refer to the nutrient budget for the final figure of mitigation required	
² Administration fee is £23 per application	

A legal agreement will be necessary to secure this avoidance and mitigation package in perpetuity. Without the security of the mitigation being provided through a legal agreement, a significant effect would remain likely. As long as such a legal agreement is secured through the planning process, the proposed development will not affect the water quality of the Solent European Sites and therefore the development will not act against the stated conservation objectives of the Solent European Sites.

Stage 4 – Summary of the Appropriate Assessment (To be carried out by the Competent Authority (the local planning authority) in liaison with Natural England

This assessment represents Havant Borough Council's Appropriate Assessment as a Competent Authority in accordance with requirements under Regulation 63 of The Conservation of Habitats and Species Regulations 2017 (as amended), Article 6 (3) of the Habitats Directive and having due regard to its duties under Section 40(1) of the NERC Act 2006 to the purpose of conserving biodiversity. Consideration of the Ramsar site/s is a matter of government policy set out in the National Planning Policy Framework.

This assessment concludes that the application will have a likely significant effect in the absence of avoidance and mitigation measures on the above Solent European sites.

The authority has concluded that the adverse effects arising from the proposal are wholly consistent with the effects detailed in the Position Statement and Mitigation Plan for Nutrient Neutral Development with regards water quality.

The authority's assessment is that the application complies with these strategies and the potential to provide mitigation to remove the significant effects that otherwise would have been likely. It can therefore be concluded that there will be no adverse effect on the integrity of the designated sites identified above.

Natural England Officer:

Summary of Natural England's comments:

Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development.

DESIGNATED HABITATS SITES – NO OBJECTION SUBJECT TO SECURING APPROPRIATE MITIGATION

This advice should be taken as Natural England's formal **representation on appropriate assessment** given under regulation 63(3) of the Conservation of Habitats and Species Regulations 2017 (as amended). You are entitled to have regard to this representation.

With regard to European Sites, Natural England does not object to the granting of this permission subject to the advice given below.

Your appropriate assessment concludes that your authority is able to ascertain that the proposal will not result in adverse effects on the integrity of any of the sites in question. Having considered the assessment, and the measures proposed to mitigate for all identified adverse effects that could potentially occur as a result of the proposal, Natural England advises that we concur with the assessment conclusions.

Your authority has measures in place to manage potential impacts through contributions to an agreed strategic solution which we consider to be ecologically sound. Natural England is of the view that if these measures, including contributions to them, are implemented, they will be effective and reliable in preventing harmful effects on the Habitats Site(s) for the duration of the proposed development.

This advice is provided on the basis that all mitigation measures will be secured as planning conditions or obligations by your authority to ensure their strict and timely implementation for the full duration of the development. Your authority should be assured that proposed financial contribution rates are proportionate to the identified effects of the proposed development, suitably precautionary, and in line with the Retail Price Index, where relevant. Provided that your authority is assured and satisfied that the budget calculations are suitably precautionary and accurately reflect the proposal, then Natural England raise no concerns with regard to the nutrient budget. We recommend a condition that secures the water use of 110 litres per person per day.
