WHITEBEAM Very tough, round-headed deciduous tree with a dense canopy of small, dark green leaves. The tree is covered in white flowers May to June followed by dark red fruits in autumn. Any canopy will tolerate full sun or partial shade. Still T&EE 201 x 121 (6m x 3.7m) in 20 years, ultimate height 50ft (15m).	HORNBEAM Common Name: Hornbeam Genus: <i>Carpinus</i> Species: <i>betula</i> Still level Beginner Exposure: Full sun, Partial shade Hardiness: Hardy Height: 2500cm Chalk/alkaline Chalk/alkaline Spread: 2000cm Time of plant seeds: October to November	ADLER Common Name: Common alder Genus: <i>Alnus</i> Species: <i>incana</i> Still level Beginner Exposure: Full sun, Partial shade Hardiness: Hardy Height: 2500cm Chalk/alkaline Chalk/alkaline Spread: 1000cm Time to plant seeds: October to April	SERV/CEBERRY TREE American native (canadians (C.) Modick Native to North America Medium to acid soil Position: Full sun or partial shade Flowering period/ colour: March to April / white, star-shaped flowers Height and spread in 20 years: 4m/3m Special features: The deciduous tree has rounded oval dark-green leaves with turn under shades of gold before autumn Fruit: Small, winged seeds Summer: This low-maintenance tree can also be used for screening
			
UPRIGHT EUROPEAN HORNBREAM (<i>Carpinus betulus</i> (hedgebeam)) Sun, Full sun to part shade Maintenance: Low Suggested use: Hedge, Shade Tree, Street Tree Oblique, Air Pollution Fruit: Small, winged seeds Summer: This low-maintenance tree can also be used for screening	UPRIGHT FIELD MAPLE (<i>Acer Campestre</i> Streetmaple) Area: 11m will grow in almost any location apart from right Soil Suitable for all soil except acidic peat Sun: Full sun to part shade it is shade tolerant Water: Medium This is a field maple that has been bred with a neat, narrow, upright egg shape canopy. The spring leaves are brilliant green, deepening as the summer goes on winged seeds have a pink tinge. <i>Acer campestre</i> Streetmaple trees are expected to reach a height of about 10 metres.		
			

			
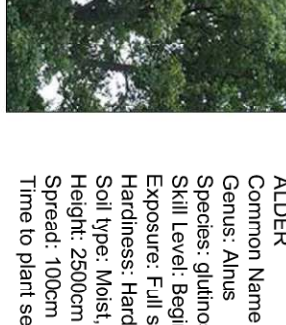

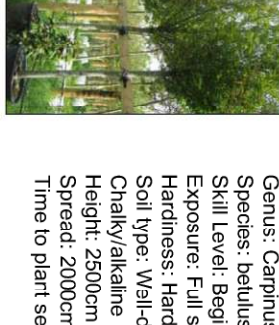

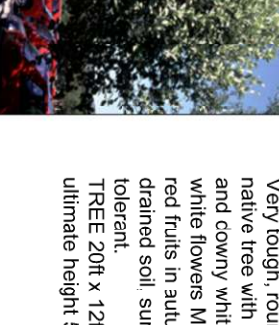

HORNBEAM Common Name: Hornbeam Genus: <i>Carpinus</i> Species: <i>betulus</i> Soil: Level Beginner Hardiness: Hardy	ALDER Common Name: Common alder Genus: <i>Alnus</i> Species: <i>incana</i> Soil: Level Beginner Exposure: Full sun, Partial shade Soil type: Moist, Well-drained/light, boggy Height: 20ftm Spread: 100cm Time to plant seeds: October to April	SERVICEBERRY TREE Scientific name: <i>Amelanchier canadensis</i> (L.) Millb. Soil: Beginner to Intermediate, neutral to acid soil Position: Full sun or partial shade Flowering period: colour: March to April / white, Hardiness: Fully hardy Height and spread in 20 years: 4m/3m Special features: This deciduous tree has rounded oval leaves, which are dark green above and silvery beneath, falling in the autumn. White, star-shaped flowers in summer. Blotched by purple-black edible fruits in late autumn. This low-maintenance tree can also be used for screening	UPRIGHT FIELD MAPLE (Acer Campestre, 'Stewartii') Notes: It will grow in almost any location apart from right on the coast. Soil Suitable for any soil except acidic peat. Soil type: Full sun, partial shade to shade tolerant Water: Medium

			
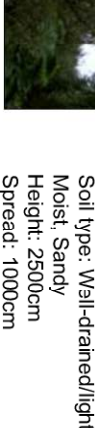

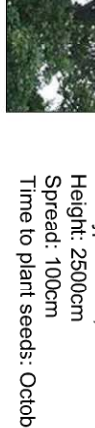

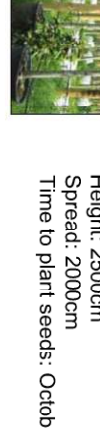

ALDER Common Name: Common alder Genus: <i>Alnus</i> Species: <i>incana</i> Soil: Well-drained Exposure: Full sun, Partial shade Hardiness: Hardy Soil type: Well-drained/light, Clay/heavy Height: 2500cm Spread: 2000cm Time to plant seeds: October to November	HORSEBEAM Common Name: Horsebeam Genus: <i>Caprius</i> Species: <i>caprius</i> Soil: Well-drained Exposure: Full sun, Partial shade Hardiness: Hardy Soil type: Well-drained/light, Clay/heavy Height: 2500cm Spread: 2000cm Time to plant seeds: October to November	SEN/CEBERRYTREE American native Soil: Well-drained to acid soil Position: Full sun or partial shade Flowering period/colour: March to April / white, star-shaped flowers Height: 10m to 20 years, 40m/30 years Special features: The deciduous tree has rounded oval dark-green leaves with turn vivid shades of gold before falling in the autumn. White, star-shaped flowers in small clusters appear in the spring. Summer: this low-maintenance tree can also be used for screening	UPRIGHT FIELD MAPLE (Acet Campensis, Streetwale) Area: It will grow in almost any location apart from right Soil Suitable for any soil except acidic peat Sun: Full sun to part shade. It is shade tolerant Water: Medium Notes: This is a field maple that has been bred with a neat, narrow, upright egg-shaped canopy. The spring leaves are brilliant green, deepening as the summer goes on. The autumn leaves are a rich yellow-orange. The winged seeds have a pink tinge. The tree is very hardy. Streetwale trees have a height of about

	Soil type: Well-drained/light, Clay/heavy. Acidic. Moist: Slightly Common Spread: 1000cm
	ALDER Common Name: Common alder Genus: <i>Alnus</i> Species: <i>incana</i> Still used: Beginner Exposure: Full sun, Partial shade Hardiness: Hardy Height: 200cm Spread: 100cm Time to plant seeds: October to April
	HORNBEAM Common Name: Hornbeam Genus: <i>Fraxinus</i> Species: <i>excelsa</i> Still used: Beginner Exposure: Full sun, Partial shade Hardiness: Hardy Height: 200cm Spread: 100cm Time to plant seeds: October to November
	WINTERBURN Very tough, round-headed deciduous native trees with leaves bright green above and dainty white beneath. Flat bunches of flowers in the leaf axils. The tree sheds red fruits in autumn. Any other tree will
	SERVICEBERRY TREE Semi-deciduous (deciduous in UK) <i>Amelanchier canadensis</i> Still used: Beginner Position: Full sun or partial shade Flowering period: March to April / white, star-shaped flowers Height and spread in 20 years: 4m/3m Special features: The deciduous tree has rounded oval leaves, whereas the winter deciduous tree has small, pointed leaves. The white star-shaped flowers are followed by purple-black edible fruits in late summer. This low-maintenance tree can also be used for screening
	UPRIGHT FIELD MAPLE (pear Campestre 'Shearwater') Still used: Beginner Position: Full sun or partial shade Flowering period: March to April / white, star-shaped flowers Height and spread in 20 years: 4m/3m Special features: The deciduous tree has rounded oval leaves, whereas the winter deciduous tree has small, pointed leaves. The white star-shaped flowers are followed by purple-black edible fruits in late summer. This low-maintenance tree can also be used for screening
	URGENT EUROPEAN HORNBEAM (Carpinus betulus) Still used: Beginner Position: Full sun to part shade Watering: Medium Maintenance: Low Flowering: Single Tree: Street Tree

	WHITEBAM <i>Viburnum lantana</i> native tree with leaves bright green above and downy white beneath. Flat bunches of white flowers May to June followed by dark drupe-like fruit. Soil: any. Partial shade. Salt tolerant. TREE 20ft x 12ft (6m x 3.7m) in 20 years.
	HORSEBAM <i>Common Name: Hornbeam</i> Genus: <i>Capinus</i> Species: <i>betulus</i> Soil: level, boggy Hardiness: Hardy Soil type: Wet/damp/light. Clay/heavy. Chalky/alkaline Spreads: 2000cm Time to plant seeds: October to November
	
	
	
	
	

	Soil type: Walden-daneifli, Clay/heavy, Acidic, Slightly acidic Height: 100m Spread: 1000cm
	Soil type: 90% fine-Melanaia with yellow flowers in the autumn giving way to berries that will attract birds during winter months
	AODOR Common Name: Common alder Species: glutinosa Still level: Beginner Exposure: Full sun, Partial shade Soil types: Moist, Walden-daneifli, Boggy Height: 2000cm Time to plant seeds: October to April
	HOROBÆM Common Name: Hornbeam Genus: Cupressus Still level: Beginner Exposure: Full sun, Partial shade Hardiness: Hardy Soil types: Moist, Walden-daneifli, Clay/heavy, Chalky/alkaline Height: 2000cm Spread: 2000cm Time to plant seeds: October to November
	WÄLDEBOM Very dark, burnished deciduous native tree with leaves bright green above and downy white beneath. Flat bunches of leaves, 10-15cm long, with serrated edges and red fruits in autumn. Any ordinary well drained soil, sun or partial shade. Salt tolerant. Tree: 2000 x 120 (6m x 5.7m) in 20 years, ultimate height 500t (15m).
	SENCEBERRY TREE (L.) Yewlike Soil: fertile, moist but well-drained neutral to acid soil Position: Full sun or partial shade Flowering period: colour: March to April / white. Hardiness: Fully Hardy Height and spread in 20 years: 4m/3m Notes: This tree has been planted on old-garden lawns which turn vivid shades of gold before falling in the autumn. While, star-shaped flowers in spring blowed by purple-black edible fruits in late summer.
	UPRIGHT FIELD MAPLE (Acet Compestive, Streetweas) Area: It will grow in almost any location apart from light soil Soil Suitable for any soil except acidic peat Sun: Full sun to part shade/It is shade tolerant Water: Medium Notes: This is a field maple that has been tried with a neat, narrow, upright egg shape canopy. The spring leaves are green and the autumn colour is a vibrant orange-yellow. The winged seeds have a pink tinge. Acet compestive Streetweas trees are expected to reach a height of about 10 metres.
	UPRIGHT EUROPEAN HOROBÆM (Cupressus betulus) Sun: Full sun to part shade Water: Medium Soil: Slightly Low Salinertolerance: Low Tolerance: Air Pollution Shade: Tree, Street Tree Fastigiate, displays a narrow, fastigiate form in youth, with ages typically maturing to 40 tall and 30 wide. Oval, rounded, bright medium green leaves to 4" long are clean and attractive throughout the growing season

	Alder Common Name: Common alder Genus: <i>Alnus</i> Species: <i>incana</i> Soil: Well-drained, slightly acidic Exposure: Full sun, Partial shade Hardiness: Hardy Wildlife/delight: Boggy Height: 250cm Spread: 100cm Time to plant seeds: October to April		SERVICEBERRY TREE Native/semi-native (L) (M) (K) Native/semi-native (L) (M) (K) Position: Full sun or partial shade Flowering period/colour: March to April / white, star-shaped flowers Height and spread in 20 years: 4m/3m Special features: The deciduous tree has rounded oval dark green leaves with wavy, wavy shades of gold before autumn. The tree is covered in small, bell-shaped, purple-black edible fruits in late summer. This low-maintenance tree can also be used for screening.
	HORNBEAM Common Name: Hornbeam Genus: <i>Opulus</i> Species: <i>rubra</i> Soil: Well-drained, slightly acidic Exposure: Full sun, Partial shade Hardiness: Hardy Wildlife/delight: Clay/heavy, Chalky/saline Height: 200cm Spread: 100cm Time to plant seeds: October to November		URGENT FIELD MAPLE (Acacia Camptocarpus) (Shepherd) Native/semi-native (L) (M) (K) Position: Full sun or partial shade Flowering period/colour: March to April / white, star-shaped flowers Height and spread in 20 years: 4m/3m Special features: The deciduous tree has rounded oval dark green leaves with wavy, wavy shades of gold before autumn. The tree is covered in small, bell-shaped, purple-black edible fruits in late summer. This low-maintenance tree can also be used for screening.
	WINTERBEE Common Name: Winterbush Genus: <i>Erica</i> Species: <i>arvensis</i> Soil: Well-drained, slightly acidic Exposure: Full sun, Partial shade Hardiness: Hardy Wildlife/delight: Clay/heavy, Chalky/saline Height: 200cm Spread: 100cm Time to plant seeds: October to November		URGENT EUROPEAN HORNBEAM (Carpinus betulus) Native/semi-native (L) (M) (K) Position: Full sun or partial shade Flowering period/colour: March to April / white, star-shaped flowers Height and spread in 20 years: 4m/3m Special features: The deciduous tree has rounded oval dark green leaves with wavy, wavy shades of gold before autumn. The tree is covered in small, bell-shaped, purple-black edible fruits in late summer. This low-maintenance tree can also be used for screening.

	Soil type: Well-drained/light, Clay/heavy. Acidic. Moist. Tolerant: No Moist. Sensitive: No Spread: 1000cm	At the end of the flowering season, the tree is covered in yellow flowers. In the autumn, the leaves turn yellow and the tree is covered in yellow leaves.
	ALDER Common Name: Common alder Genus: <i>Alnus</i> Species: <i>Alnus</i> Soil level: Beginner Exposure: Full sun, Partial shade Soil type: Moist, Well-drained/light, Boggy Height: 2500cm Spread: 1000cm Time to plant seeds: October to April	SEVICERBERRY TREE Soil type: Acidic, alkaline (L) M.H.H. Moist. Tolerant: No Moist. Sensitive: No Spread: 1000cm
	HORNBEAM Common Name: Hornbeam Genus: <i>Carpinus</i> Species: <i>betulus</i> Soil level: Beginner Exposure: Full sun, Partial shade Soil type: Well-drained/light, Clay/heavy. Height: 2500cm Spread: 2000cm Time to plant seeds: October to November	UPRIGHT EUROPEAN HORNBEAM (<i>Carpinus betulus</i> (astigilae)) Sun: Full sun to part shade Soil level: Beginner Exposure: Full sun to partial shade Soil type: Well-drained/light, Boggy Height: 2500cm Spread: 1000cm Time to plant seeds: October to April
	WHITEBARK Very tough, round-headed deciduous native tree with dense bright green above and below the leaves. The tree is covered in white flowers May to June followed by dark red fruits in autumn. Any ordinary well drained soil sun or partial shade. Self seed. TREE 21m x 121 (6m x 3.7m) in 20 years, ultimate height 50ft. (15m).	COMMON OAK (English Oak) Soil type: Acidic, alkaline (L) M.H.H. Moist. Tolerant: No Moist. Sensitive: No Spread: 1000cm

	Most Satisfying Soil type: Well-drained/light, Clay/heavy. Acidic. Spread: 1000cm	Any existing sap-free Malvaeae with yellow flowers in the autumn giving a good view to berries that will attract birds during winter months
	ALDER Common Name: Common alder Genus: <i>Alnus</i> Species: <i>Alnus incana</i> Soil: Well drained Exposure: Full sun, Partial shade Hardiness: Hardy Height: 2500cm Spread: 100cm Time to plant seeds: October to April	SEW/CERBERY TREE American native canadensis (C.) (Medic) Soil: Well drained to acid soil Position: Full sun or partial shade Flowering period/ colour: March to April / white, star-shaped flowers Height: 10m Height time to spread in 20 years: Any 20m Special features: The deciduous tree has rounded oval dark-green leaves with turn under shades of gold before turning vibrant yellow in autumn. The tree is a good specimen tree and is best by purple-black edible fruit in late summer. This low-maintenance tree can also be used for screening
	HORNBEAM Common Name: Hornbeam Genus: <i>Carpinus</i> Species: <i>Carpinus betulus</i> Soil: Well drained Exposure: Full sun, Partial shade Hardiness: Hardy Chalk/alcaline Height: 2500cm Spread: 2000cm Time to plant seeds: October to November	UPRIGHT FIELD MAPLE (Acer Campestre Streetwae) Area: 11m given in almost any location apart from right Soil: Suitable for any soil except acidic peat Sun: Full sun to part shade/ it is shade tolerant Water: Medium This is a field maple that has been bred with a neat, narrow, upright egg shape canopy. The spring leaves are brilliant green, deepening as the summer goes on. The winged seeds have a pink tinge. <i>Acer campestre</i> Streetwae trees are expected to reach a height of about 10 metres.
	WHITEBEAM Very tough, round-headed deciduous native tree with sweet bright green above and silvery grey beneath. The leaves are May to June followed by dark red fruits in autumn. Any ordinary well drained soil, sun or partial shade. Still TREE 201 x 121 (6m x 3.7m) in 20 years, ultimate height 50ft (15m).	UPRIGHT EUROPEAN HORNBEAM (Carpinus betulus (siliquata)) Sun: Full sun to part shade Maintenance: Low Suggested Use: Hedge, Shade Tree, Street Tree Toxicity: At Poison Soil: Well drained, narrow, bestside fern in patch, but gradually acquires a bare drop or overhanging space with age. Typically maturing to 40' tall and 30' wide. Overall, rounded, bright medium green leaves (to 7" long) with little serration. The underside of the leaves turn yellow-orange in autumn. Trunks have smooth gray bark and distinctive muscic-filing fluting.
MAINTENANCE Light fitting by DM Winifred	MAINTENANCE Light fitting by DM Winifred	COMMON OAK (English Oak) Quercus robur is very slow growing eventually reaching 100 years old. It is a tree with acorns on long stems in autumn. Good in hedgerows as it usually produces tap roots in early life, it does not rob the surrounding plants of moisture and nutrients.

	Soil type: Well-drained/light, Clay/heavy, Acidic. Moist. Sundry Spread: 1000cm	
	ALDER Common Name: Common alder Genus: <i>Alnus</i> Species: <i>Alnus</i> Still level: Beginner Exposure: Full sun, Partial shade Hardiness: Hardy Height: 2500cm Spread: 1000cm Time to plant seeds: October to April	
	HORNBEAM Common Name: Hornbeam Genus: <i>Carpinus</i> Species: <i>caroliniana</i> Still level: Beginner Exposure: Full sun, Partial shade Soil type: Well-drained/light, Clay/heavy, Chalky/saline Height: 2500cm Time to plant seeds: October to November	
	WHITEBARK Common Name: Whitebarked deciduous Genus: <i>Betula</i> Species: <i>pendula</i> Still level: Beginner Exposure: Full sun, Partial shade Soil type: Well-drained/light, Clay/heavy, Chalky/saline Height: 2500cm Time to plant seeds: October to November	
	COMMON OAK Common Name: Common oak Genus: <i>Quercus</i> Species: <i>alba</i> Still level: Beginner Exposure: Full sun, Partial shade Soil type: Well-drained/light, Clay/heavy, Chalky/saline Height: 2500cm Time to plant seeds: October to November	

	AAV-1 light fitting by Philips -O' light fitting by DW Windsor -O' light fitting by DW Windsor a double branch fitting to single pole		WHITEBEAM Very tough, round-headed deciduous tree with a dense, rounded crown of dark green and creamy white beneath. Flat bunches of white flowers May to June followed by dark red fruits in autumn. Any ordinary well-drained soil, sun or partial shade. Salt tolerant. TREE 20m x 12ft (6m x 3.7m) in 20 years, ultimate height 30ft (9m).		HORNBEAM Common Name: Hornbeam Genus: <i>Carpinus</i> Species: <i>betulus</i> Exposure: Full sun, Partial shade Hardiness: Hardy Soil type: VAI-dried/light, Clay/heavy, Height: 2500cm Spread: 2000cm Time to plant seeds: October to November 10 metres.		ALDER Common Name: Common alder Species: <i>alnosa</i> Soil level: Beginner Exposure: Full sun, Partial shade Soil type: Moist, VAI-dried/light, Boggy Height: 2500cm Spread: 1800cm Time to plant seeds: October to April		SEVIGERBERRY TREE (L. MxH) Soil: fertile, moist but well-aerated neutral to acid soil Position: Full sun or partial shade Flowering period: colour: March to April / white, Hardiness: Fully heavy Height and spread in 20 years: 4m/3m Special features: The deciduous tree has rounded oval leaves, 10-15cm long, dark green above and silvery below, falling in the autumn. White, star-shaped flowers in spring, blown by the breeze back edible fruits in late summer. For over-maintenance tree can also be used for screening	UPRIGHT FIELD MAPLE (Acer Campestre, Streetwasy) Area: It will grow in almost any location apart from right on the coast (for dry soil) except acidic peat Sun: Full sun to part shade it is shade tolerant Water: Medium Maintenance: Low Notes: that has been born with a neck, narrow, upright egg shape canopy. The spring leaves are brilliant green, deepening as the summer goes on and the autumn colour is a vibrant orange-yellow. The tree is very hardy and can tolerate frost and drought. Streetwase trees are expected to reach a height of about 10 metres.		UPRIGHT EUROPEAN HORNBEAM (<i>Carpinus betulus</i> (testisleaf)) Sun: Full sun to part shade Maintenance: Low Suggested Use: Hedge, Shade Tree, Street Tree Features: Fastigiate, displays a narrow, testisleaf form in youth, but gradually acquires a leafy drop or oval-ovate shape with age, typically maturing to 40' tall and 30' wide. Notes: The tree is very hardy and can tolerate frost and drought. It is often and attractive throughout the growing season with little susceptibility to clear diseases. Foliage turns yellow-orange in autumn, turns to smooth gray bark and distinctive, rounded the fluting.			COMMON OAK (English Oak) Quercus robur is hardy, slow growing, eventually forming a large round-headed native deciduous tree with a dense, rounded crown of dark green leaves. It usually produces tap roots in early life, so it does not rob the surrounding plants of moisture and nutrients. Although it produces a broad crown, it does not prevent it from being used as a windbreak. It is home to a copious number of insects and species of well-drained soil, tolerant to clay, produces best quality wood. TREE 50ft x 8ft (4m x 2.4m) in 20 years, ultimate height 100ft (30m).		Any delicate species like Malva with yellow flowers in the autumn giving way to berries that will attract birds during winter months
