Dear Jason,

Planting Specification

I enclose the planting specification for North Street Arcade and I will email over the planting specs so you can add them in to your drawings. The planting is at a density of 3 plants/sqm . The beds should be dressed with 75cm bark chippings to retain the moisture and suppress the weeds.

The tree shall be planted in a suitable sized tree pit and triple staked to allow for the prevailing wind.

Maintenance schedule:

All planted areas should be annually pruned and weeded as necessary to maintain good plant shape and to remove any dead or damaged leaves. Any plant deaths in the first 5 years will be replaced for matching plant species and size and any replacements to be in keeping with the original planting . The trees stakes and ties will be regularly checked and adjusted as the trees grow and mature.

If you have any queries, please call me on 07884 492315 or email me at info@gardenangel.org.

Yours faithfully
