

HERITAGE STATEMENT

26 HIGH STREET, EMSWORTH

This 2 storey building is a shop (and former house) built in the mid 18th Century and sits within the Emsworth Conservation area.. It has stucco coated walls and a tile roof with parapet to front of the building and there is a wooden, moulded band around the shopfront which holds the signage. The windows are Victorian sash and the shopfront dates from the early 20th Century.

The proposed installation of the vent axia will have no effect on the front of the building at all. There will be a small vent at first floor level at the rear only. There are no historic features that will be impacted by the installation of the vent and care will be taken so that any alterations required can be successfully reversed at a later date, if required. The vent axia system is required by this charity to ensure the continued successful running of this shop. The ability to steam clean clothes and linens is vital to the shop and its future at this location.
