

PROTECTION OF TREES ON DEVELOPMENT SITES

REMEMBER: A TREE IS A LIVING THING-TAKE A LITTLE CARE & SAVE IT...

Tree roots are vital to support and feed trees. For most trees the likely Root Area is 1metre beyond the Crown Spread.

Trees should be protected by surrounding the Root Area with fencing at least 1200mm. high.

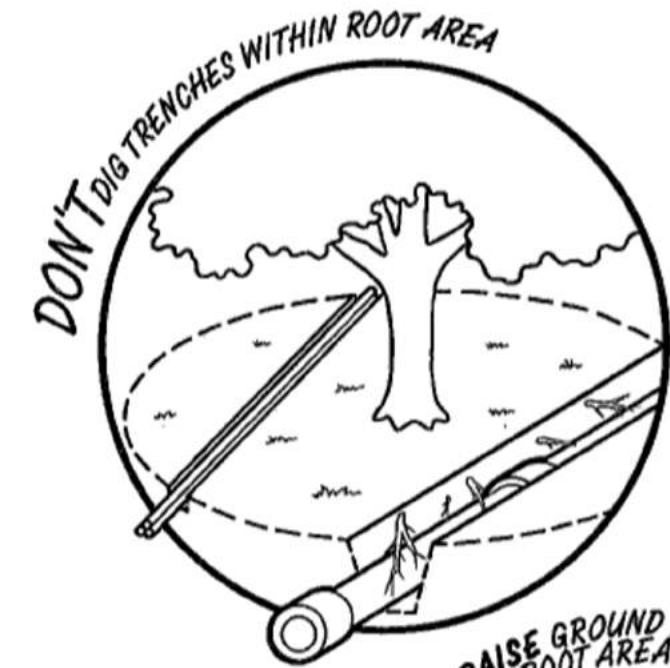

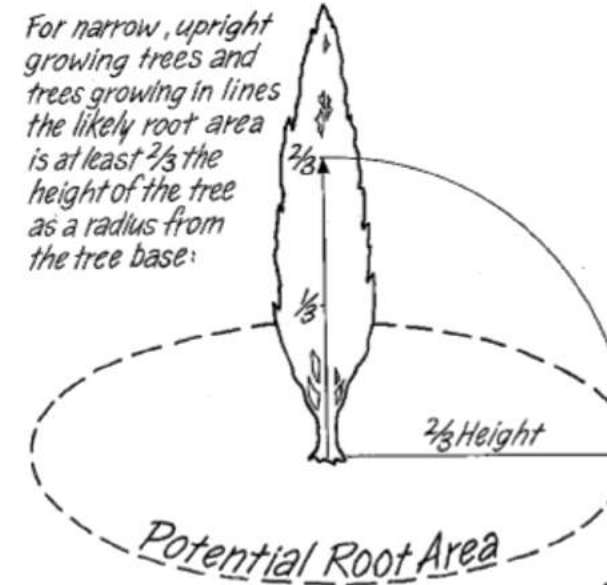

Trees in heavy plant/machinery access and working areas should be protected by 2400 mm. high hoardings mounted on scaffolding.

Please display this notice prominently on site and inform all relevant personnel

For further information please contact Hart District Council's Tree Section; Telephone 01252 622122

For narrow, upright growing trees and trees growing in lines the likely root area is at least $\frac{2}{3}$ the height of the tree as a radius from the tree base:

ANY ONE OF THE ABOVE WILL KILL A TREE OR SERIOUSLY SHORTEN ITS LIFE.
