Dear Mrs Houghton

Ref APP/15/01273

Regarding my request to install a single small box (for air conditioning) onto the outside wall of my building I thank you for your letter of 11/11/15. Addressing Point 4 - please see Attachment 1....

- The operational noise level when cooling would be up to 63dBA – around the same as “Fairly quiet conversation in an office”. <http://www.industrialnoisecontrol.com/comparative-noise-examples.htm>
- The outdoor box dimensions would be Height/Width/Depth (mm) – 550/780/290.

I haven't addressed Points 1,2+3 because I feel this request is not appropriate. I feel this because the outdoor box would run at conversational levels of noise - drowned out during its operational hours by noise from the adjacent busy road. The medium sized, tan coloured air conditioning box would sit in among three other medium sized, tan coloured boxes (the gas meter containers) and as such would blend in – please see attachment 2+3. In light of this I feel the requests for detailed maps and architects' scale drawings are excessive when balanced against a common sense appraisal of the magnitude of my proposal.

Sincerely

Peter Raftery
