

Viking Super Rope End Swinger
A dynamic rope swing that appeals to all ages, great for team work and coordination

Timber Tree House & Play Structure
A focal play piece for climbing and group play, and general hanging out. Comes with tree house, ropes, nets and slide. Appeals to a wide range of ages

Pendulum Swing
A rotating see-saw swing for 4 users

Play Area Proposals

In order to suit the green parkland setting and character of the site, the proposed play area would use naturalised timber & steel play equipment set within a grass rubber mat surface, perhaps with a sand or wood chip area as well. In a flat site, grass mounds would enhance the play area considerably, adding height and character to partially enclose the play area within the surrounding green space.

Toddler Play
A small hill slide, see-saw, springer and spinning pole for toddlers

Swings
Always popular with children. Ideally include both toddler & junior swings

Natural Play Features
Informal grass mounds with bridges or a tunnel, a sand pit, glacial boulders and tree trunks for informal play and seating. Option for decorative wood carving. Small trees would provide an additional feature for climbing and den making, as well as some shade & shelter from strong winds.

Seating
Steel or timber picnic tables
