

Chichester Harbour Conservancy Comments on planning applications (decided under officers' delegated powers)

These air conditioning units would be so positioned between existing built form, such that they would not be too visible in the wider area. Whereas it is not clear how the central two a/c units would be affixed to the building (some sort of upright supporting bracket one assumes), this is a point of detail the council can condition.

The technical data for the units, shows that they are acoustically attenuated, which is supported by the Conservancy, to reduce back ground noise levels close to the Harbour.
