Mrs D Haywood
Havant Borough Council
Public Service Place
Central Road
Havant-Hants

Dear Mrs Haywood

Proposed Development of 76 Dwellings Your Ref: AR/15/00919
Station Road, West Town, Hayling Island.

Many residents in this area are deeply concerned about the impact of traffic that will arise in this area should these planning proposals go ahead. The council will be aware that concerns were brought to your attention about speeding traffic along this road when you piloted a scheme in November 2012 and this area was included, the 20mph was however turned down.

We hope you can understand our concerns knowing that the entrance & exit to this development will be on a road that in places has very narrow paths on both sides of the road (in one place almost none-existent) where only one person at a time can

can walk, meaning sometimes mums with pushchairs and elderly with trolleys etc need to walk on the road as they are too wide to actually stay on the paths.

We appreciate that cars and other vehicles are a part of everyday life now (and people need houses) and that not everyone drives at speed and dangerously but the amount of traffic i.e. lorries and large machinery while building work is going on and then comes from new homes will be a massive impact on this already dangerous road and very worrying for residents already living here - many who are elderly with disabilities who walk with sticks, please think very hard before this scheme is decided on, and perhaps a look at Station Rd by your

Transport & Environment people would give you a better idea of our concerns, this was actually suggested in Nov 2012 when the 20mph was looked into, enclosed.

Enclosed is a short survey done today ^{21/9/2015} others can be done if you would like

Yours Sincerely,

I = CARS O = LORRIES & VANS M = MOTORCYCLES MONDAY 21/9/15 12.20 - 1.20

TO WEST TOWN BUS BUS

(10)	(10)	(10)	(10)	(10)	(10)	(10)	= 60
(10)	(10)	(10)	(10)	(10)	(10)	(10)	= 50
(10)	(3)						= 13
							<u>123</u>

FROM WEST TOWN BUS BUS

(10)	(10)	(10)	(10)	(10)	(10)	(10)	= 60
(10)	(10)	(10)	(10)	(10)	(10)	(10)	= 60
(10)	(10)	(10)	(10)	(6)			= 46
							<u>166</u>

TOTAL: 166 + 123 = 289 VEHICLES BETWEEN
+ 4 BUSES 12.20 - 1.20 PM!

This survey - although simplistic - was done by a resident of Maple Court - whose windows look out over Station Rd. As you can see the amount of vehicles total 289! in a quiet period of the day, this coupled with a possible extra 162 cars plus all extra commercial vehicles will put a tremendous strain on an already overcrowded road
