Fully Sculptured Window System

For the best profile anywhere

VEKA Matrix Fully Sculptured

The choice of specifiers

Matrix FS is widely chosen for its aesthetic appeal, with a soft, sculptured appearance. Demand for the Matrix FS system continues to grow in new build and commercial applications for projects requiring the look and feel of quality hardwood frames, without the maintenance.

The choice of fabricators

The Matrix FS system is technically exceptional and allows for simple fabrication and trouble-free installation.

The 70mm front-to-back dimension makes the system ideal for the tidy replacement of traditional, slimmer windows.

The choice of homeowners

Windows created from the Matrix FS System not only look superb, but also enhance a home's warmth, security and value. Requiring minimal maintenance, the FS System is also designed to include Secured by Design (SBD) features, enabling an enhanced security specification far higher than old-fashioned timber windows.

Its soft, rounded lines can offer a level of detailing that is sure to appeal to the discerning homeowner.

Style and functionality

Windows created from the stylish Matrix FS System are fitted with tough steel and alloy hardware components including, where appropriate, multipoint locking, hook-locks, shootbolts and other mechanisms which provide a formidable barrier against intruders.

The result of massive investment in development, tooling and extrusion technology means that the VEKA Matrix FS System can be used to create virtually any style of window or door, for any type of building including casements or tilt & turns.

Supplied with pre-inserted gaskets and available in a range of woodgrain effects and colours.

Open new doors

Advanced technology doesn't have to be left at the door. You can now have all the same good looks and security with the VEKA Fully Sculptured system for doors too. Whether it's the traditional front and back door, patio door (sliding) or French (hinged) double doors, you can enjoy the same looks, security and weather resistance to perfectly match your Fully Sculptured windows.

Versatility

The VEKA Fully Sculptured system can be used to create a wide range of traditional casements, tilt & turn or french windows and doors. A popular option for a secure method of ventilation coupled with easy clearing from the inside.

...the window system with softer lines

Window Style		Max Width	Max Height	Door Style		Max Width	Max Height
