Subject:

#1 DUST CONTROL During demolition all effected works will be dampened down to prevent the spread of dust with sprinkler system. All operatives are trained in the use of & provided with the relevant P.P.E.

- *Dust mask
- *Goggles
- *Safety helmet
- *Ear defenders
- *Safety boots
- *Protective clothing.

Concrete cutting of floor, to facilitate the laying of drains & services. The concrete cutter has a pull along trolley & is fitted with a water container to discharge water to the affected area, to eliminate dust at source.

Breaking of concrete. Very minimal dust is produced but it can occur, when it does. A sprinkler system will be used to eliminate dust & dampen down the area.

General disc cutting. When the disc cutter is being used the cutters in question have a pre fitted hose connection which in turn sprays the disc eliminating dust at source.

Drilling into walling. All drill used to drill into existing masonry will be fitted with dust collectors.

Cutting of timber. Any machined cutting of wood will be carried out by skill/chop saws which have dust extraction bags fitted to collect unwanted dust.

#2 OPERATING TIMES No works & ancillary operations associated with any construction works at the development, which are audible at the site boundary, shall take place on any Sunday or bank/public holiday, nor on any other day except between the following times: Monday-Friday: 08:00-18:00 Saturday: 08:00-13:00.

#3 DISPOSAL OF WASTE All waste product to be cleared off site to the relevant transfer station, i.e. No burning or burial of waste. All clearance of waste to be carried away by grab, skip or tipper lorries. As waste is being collected a water spray system will be used. Normally a hose with a sprinkler attachment is sufficient.

Thank you for your help in this matter Daphney and hopefully we can now proceed.
Many Thanks
Mark budd
