Subject: FW: Proposed Generator Compound, Harts Farm Way Ref: APP/14/00800

David

The tree survey provided is comprehensive however it does not address my earlier points:

- The site plan is difficult to interpret and would benefit from a TOPO with RPA's plotted accurately against the proposed generator siting to include the entrance to the site.
- The principle Poplar scheduled for removal is an important tree in the area and if possible alternatives to its removal should be explored, such as a re route of the entry road.
- It is unclear as to the impact the compound will have on the surrounding copse and as such this must be clarified.

The tree report highlights the need for an AIA to be undertaken once the proposals on site are clear - this will need to be done so as I can provide an informed opinion on the potential for impact on the trees.

So to clarify - good tree survey, the requirement as highlighted in the report for an AIA is now required to address the above points.

Thanks

J
