-----	-------------	------	------	------

This architectural drawing shows the front elevation of a house. The structure features a gabled roof with a prominent ridge line. The facade is composed of two main sections: a larger rectangular section on the left and a smaller gabled section on the right. The left section has a central vertical axis with four windows: a large four-pane window at the top, followed by two smaller four-pane windows, and a single four-pane window at the bottom. The right section, which is narrower, has a single large four-pane window at the top and a smaller four-pane window below it. The roofline is defined by a series of parallel lines, and the overall style is that of a technical architectural sketch.

Figure 1 is a vertical bar chart showing the distribution of the number of children per woman. The y-axis is labeled 'Number of children per woman' and ranges from 0 to 6m. The x-axis represents the proportion of the population. The distribution is skewed to the right, with a peak at 1 child per woman.
