

Land off Harts Farm Way

David Please find my comments below regarding the above site.

The supporting arboricultural evidence is comprehensive and outlined/highlighted in the following points:

Minimal tree removal is required to facilitate the proposed generator scheme, in addition to this there is a requirement for some tree pruning works to facilitate works, the trees proposed for removal are all of a lower value and grading, although they do contribute positively to the character and density of the surrounding copse. The pruning works are considered reasonable tree management.

There have been a number of revisions to this scheme, which after discussion have gone some way to prevent greater tree loss and also improved protection of those trees being retained.

From a review of the Landscape Plan - tree planting will be added to enhance this site and will adequately mitigate the loss of any current trees from this site.

Provided that the methodology prescribed in the AMS & TPP report is strictly adhered to and a site monitoring exercise is undertaken I would expect the retained trees to survive the development unscathed and to continue to grow on in the future, therefore I have no objections to this scheme in arboricultural terms.

Thanks
J
