

Design and Access Statement

39 London Road, Purbrook, Waterlooville, PO7 5LF

This application is submitted in line with Hampshire Highways requirements to seek permission for new vehicular entrances on to classified roads.

It is proposed that the new entrance (3.2m wide) is formed through the existing boundary wall and new brick built piers are constructed in a similar style to the existing to either side. The driveway allows vehicles turn on site so that access to and departure from the entrance is in a forward gear.

Adequate visibility splays can be achieved for the speed of the road to the proposed entrance.

The new driveway will be constructed in a permeable surface with drainage across the entrance to manage any excess runoff.
