Sally

With regard to the PFS at ASDA Waterlooville:

The supporting arboricultural evidence is comprehensive and outlined in the following points:

Some tree removal is required to facilitate development as well as a requirement for some tree pruning works to facilitate works. The total tree loss is 7 individual trees and 1 group of trees - some of these fall within the boundary of WCC.

The trees proposed for removal are C and B grades and although small and sitting within the existing parking area, they do contribute positively to the area in terms of providing public amenity value.

The tree edging appears to receive adequate protection and as such provided that the methodology prescribed in the AMS & TPP report is strictly adhered to and the site monitoring exercise is undertaken I would expect the retained trees to survive the development unscathed and to continue to grow on in the future.

I have not seen sight of the Landscape Master Plan so can not comment on this area, although tree planting as well as other landscape features should be added to enhance this site so as to adequately mitigate the loss of any current trees from this site.

Thanks
J
