**The Town and Country Planning (Development Management Procedure) (England) Order
2010
Notification of Decision**

Application Number: APP/13/01070

Site Address: The Old Manor House, 9 Brockhampton Road, Havant

Proposed Tree Works: Reduce height of 2No. Eucalyptus by 6m within Conservation Area of Brockhampton.

Further to your notification received on 25 October 2013, Havant Borough Council, as Local Planning Authority, advises that it **Raises No Objection** to the above tree work in Brockhampton Conservation Area.

This decision is subject to the work being carried out in accordance with the details submitted with your notification and if you wish to vary the works proposed or carry out the work at a later time it may be necessary to submit a further formal notice under the above Act and give the Council as Local Planning Authority a further 6 weeks to reach a decision. Should you wish to obtain any further advice in this matter, please contact the Council's Tree Officer by ringing in the first instance the Customer Service Centre on 023 9244 6015.

You must consider the timing and type of tree work operations to avoid causing disturbance to any nesting or breeding birds or bat roosts that may be present within trees in accordance with the Wildlife and Countryside Act 1981 (as amended) and the Conservation of Habitats and Species Regulations 2010. Before any felling of trees, tree surgery, or ground clearance commences, a thorough external inspection of the tree should be undertaken. If any protected species are identified during the inspection, you should refer to Natural England's Protected Species Standing and seek the advice of a qualified ecologist in how to proceed. Details are available via the main enquiry line 0300 060 3900 or at:

<http://www.naturalengland.org.uk/ourwork/planningdevelopment/spatialplanning/standingadvice/advice.aspx>

Disturbance to nesting birds during the months between April and September should be avoided.

The following factors increase the probability of trees being used by roosting bats:

- Located in ancient woodland or parkland

- Large trees with complex growth form

- Species that typically form cavities, such as beech, willow or ash

- Visible damage caused by rot, wind, woodpeckers, lightning strike etc.

- Loose bark providing cavities

Our Ref: APP/13/01070

If nesting birds or bat roosts have been disturbed (and therefore a breach of the above-mentioned legislation has taken place), you should report the matter to the Police immediately, as a wildlife crime may have been committed.

A handwritten signature in black ink, appearing to read 'C. Murray'.

Mr Chris Murray
