Good morning Daphney,

Thank you for the additional informations.

I have no other comments to make and appears the applicant has thought of the noise potential impact and mitigated it

I hope this helps

Kind egards
laurent

Daphney

As discussed last week the answers to the questions raised in the attached email are as follows:

1. We do not anticipate that there will be any additional noise created by the development for the following reasons. The area is currently used for outdoor storage of the materials used within the factory, these are currently transported to and from the existing building via forklift. The new building will cover these and subsequently contain the noise of the forklift within the structure. The materials used of the construction will also aid the noise and the composite steel panels used of the walls and the insulated roof will absorb any noise created. The new building will not be any larger than the area currently used for outdoor storage so there will be no additional movements on site. The new building will allow the client to store different materials that could not be stored outside.
2. The company are not proposing to increase the number of staff at all as part of the proposed development so therefore we see no requirement for any additional parking spaces on site. As there is to be no increased levels of transportation we do not see the requirement for a travel plan, is this the case?
3. Can you please send me the legal pack as requested in my email on Friday as a matter of urgency as we do not want to delay the application process any more.

Can you confirm that these answers are satisfactory and if they are not please advise to what information you would still require.

Regards
