

Good afternoon Richard,

I had a look at the application and I have concerns relating to the potential noise aspect of the application.

This type of equipment is in itself relatively quiet however once a couple of children do start using the equipment, the noise from those children would in my opinion be heard in neighbouring properties. the applicant informs that the are would be used, evenings, week ends by the children, this being the times when local residents would be home and therefore having the potential to be highly disruptive. I understand that some fencing and trees/bushes are located on boundaries, however acoustically speaking this would have very little affect to absorb, minimise or contain the noise, particularly if and when the trampoline is used. this because the noise generated would be moving.

I read that the applicant informed that supervision would be in place to minimise the impact on nearby residents. [REDACTED]

Due to the location of the proposed development and the potential for disturbance to local residents I would recommend this application be refused.

This because no real acoustic measure to minimise the noise could be implemented.

I hope this helps but please do not hesitate to contact me if you wish to discuss the content of this email

Yours sincerely,

Mr. L. Lemagnen
