RECEIVED

Identification of Tree and Description of Work

DATE: SATURDAY 7TH SEPT 2013

TO: JAMIE GARGETT
Havant Planning and
Development.

FOR: OAK TREE WORK
SALTMARSH RESIDENTIAL CARE
HOME, 12 SALTMARSH LANE,
HAYLING ISLAND, PO11 0JT

DESCRIPTION of Work

As identified on the Attached Diagram.

OAK TREE 1: Infected with White Rot, evidence of this is shown by the presence of the bracket fungus Ganoderma Adspersum. It is unclear how long the Fungus has been present and may take several years to result in death of the tree. However given the nature of the disease and its proximity to other neighbouring property removal is recommended.

OAK TREE 2: Cavity at base of stem and beneath, Removal recommended

OAK TREE 3: All leaves appear lime green in colour and a number of limbs showing signs of Die Back. Canopy is sparse, Tree in Decline and Removal is Recommended

OAK TREE 4: Infected with White Rot – Ganoderma Adspersum present – Removal is recommended.

OAK TREE 5: Showing Fine Health. Minimal work desired. Crown raise to allow access for emergency and delivery vehicles.

OAK TREE 6: Dying, mostly deadwood. Removal

OAK TREE 7: Infected with White Rot, evidence of this is shown by the presence of a large bracket fungus, Ganoderma Adspersum. Visible production of poor fruit. Removal is recommended.

Dear Jamie

I have had a number of visits to Saltmarsh House in the past few weeks and spent some time examining the trees in question. All have varying states of health and either dead, dying or diseased. After being in Discussion with the owner of Saltmarsh Residential Care Home, permission was granted some time ago to carry out work on the oak trees in question. It has been at least 3 years since the application was approved and the work was never carried out. As this previous application has timed out the owner has approached my services to complete the work and expressing great concern.

In my professional opinion and I hope you will agree from the photographs my application for the work is justified. Given the nature of the diseases present, the location of the trees to neighbouring property and the expressing concerns of the owner of Saltmarsh Residential Care Home. I hope this application is enough to grant the permission required to carry out the work.

I look forward to hearing from you soon

Yours Sincerely

Anthony
