

Flat 4, 4 East Street, Havant, Hants, PO9 1AQ

Heritage Statement

I do not think changing my windows from wooden sashes to double glazed uPVC sash windows will have any noticeable impact on the heritage of the surrounding area.

This being due to the fact that the windows *can not be seen from the road*. My windows are all situated to the back of the block. The back of the building is inaccessible to the general public. The residents of these flats cannot access the back either.

My windows face on to a car park belonging to a business, which has only a limited amount of use, and a number of work related buildings, which have not been use for a period of time. See photographs relating to

views from the window of the kitchen, lounge, bathroom and bedroom.

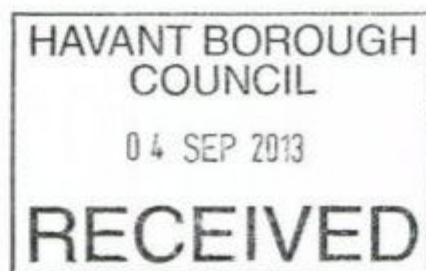

I will employing a window fitter who will undertake the work sympathetically with regard to the character of the property. I have already identified a workman, who has undertaken work replacing the wooden sash windows and replacing them with double glazed uPVC sash windows, of a friend of mine. I am confident that this individual works to a very high standard. See photographs relating to this. I will be looking to employ this individual.

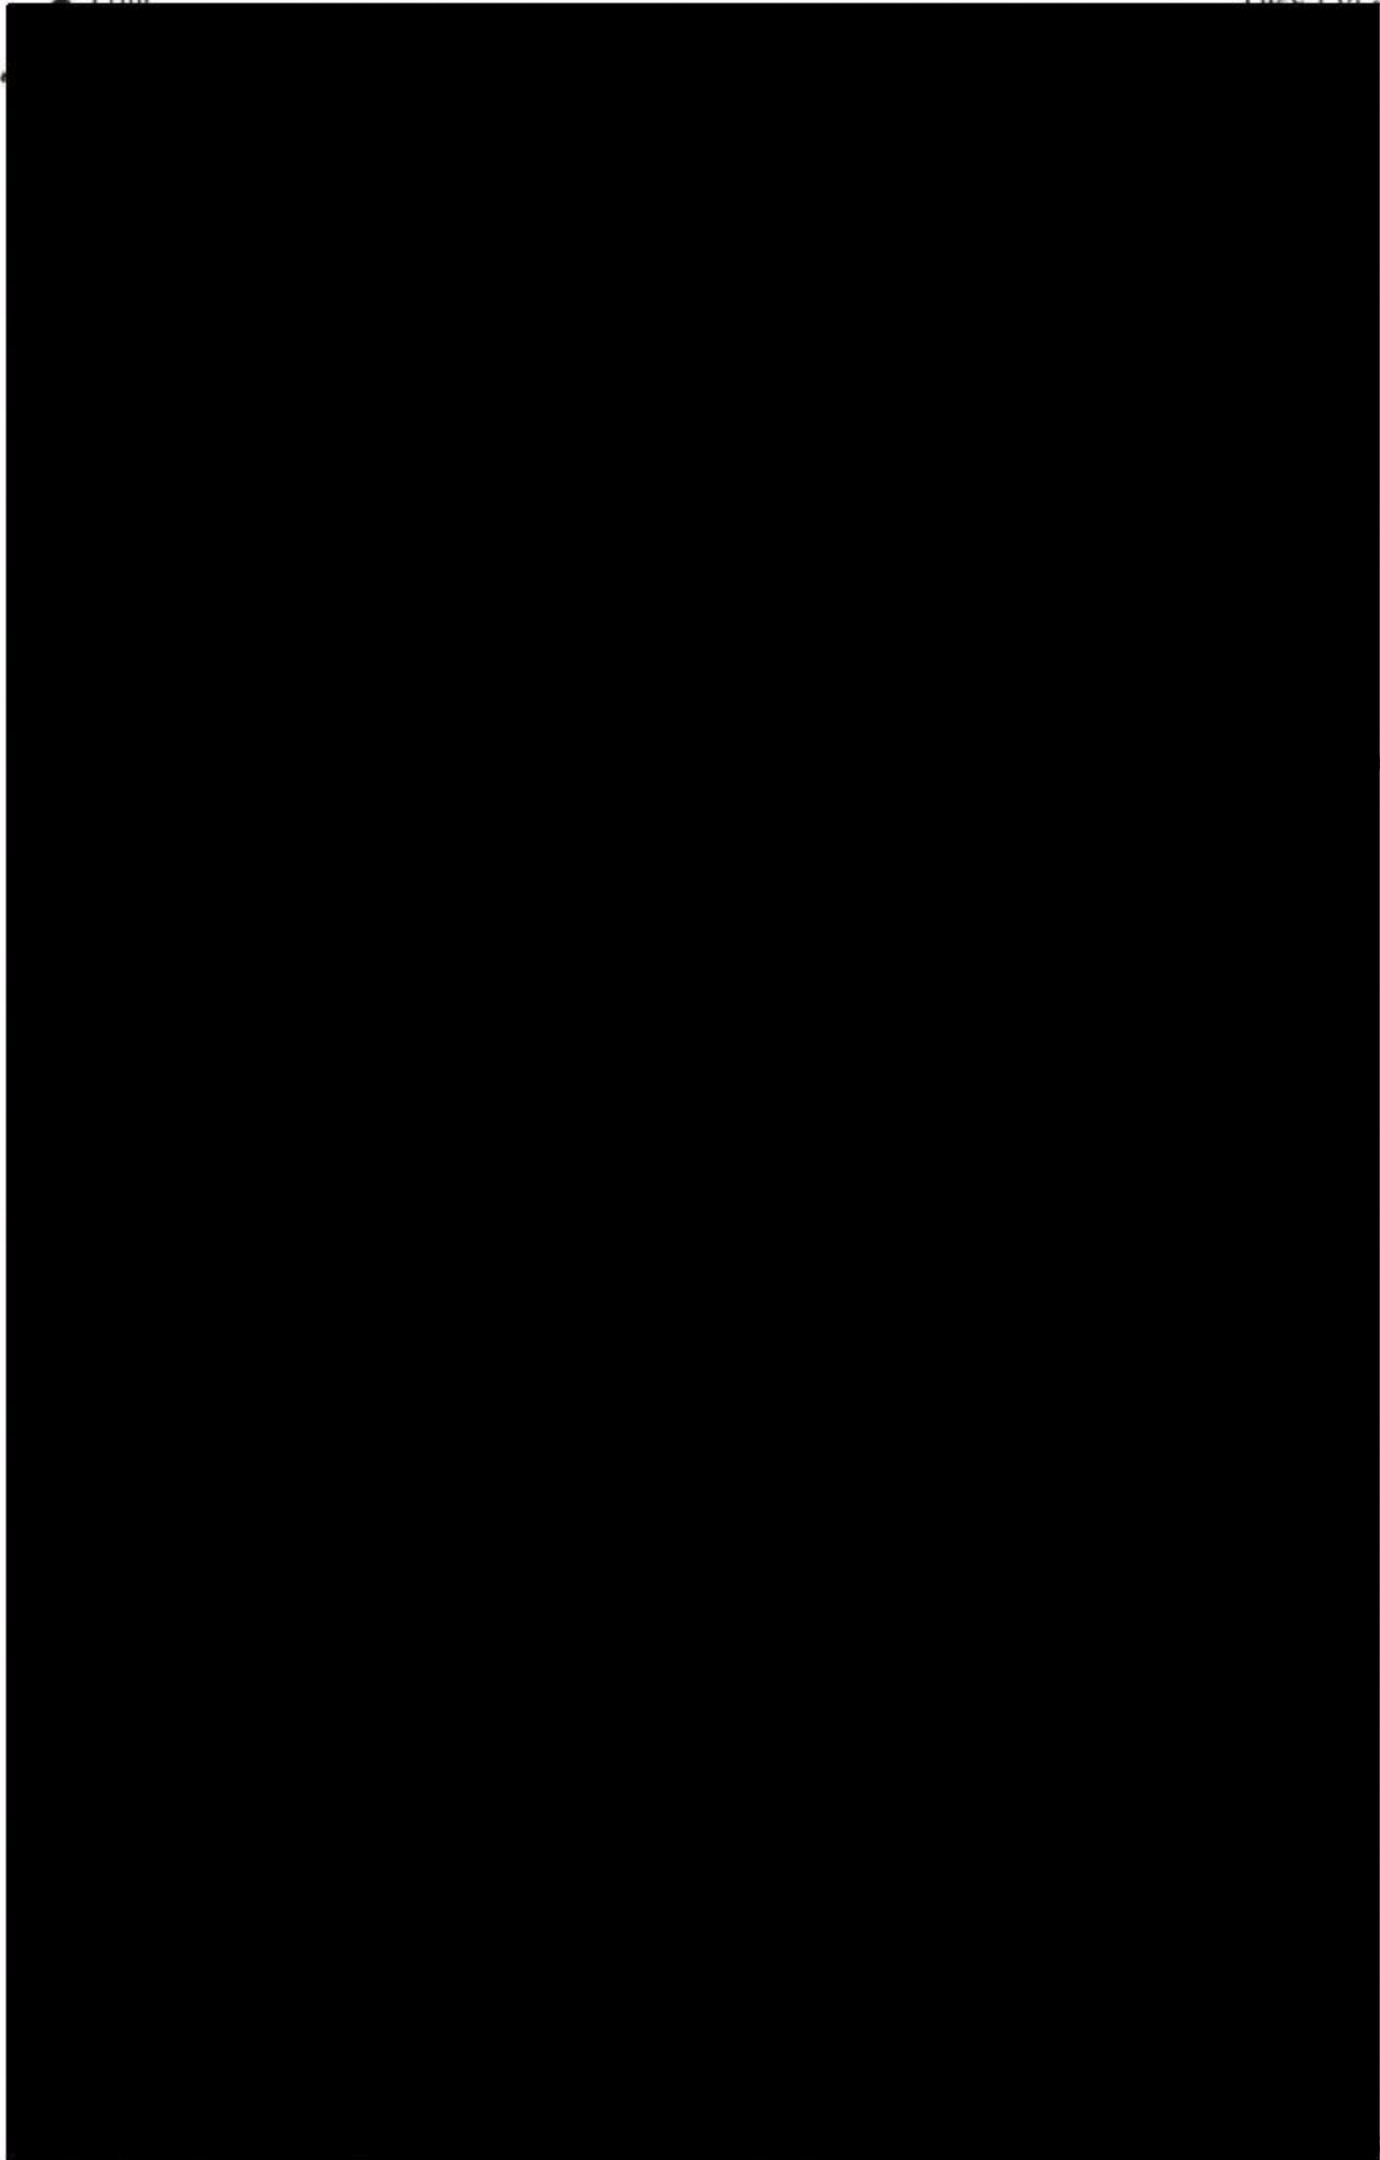

I will be keeping the internal wood surrounds. It will be very difficult to distinguish the new uPVC sashes from the old wooden ones either internally or externally.

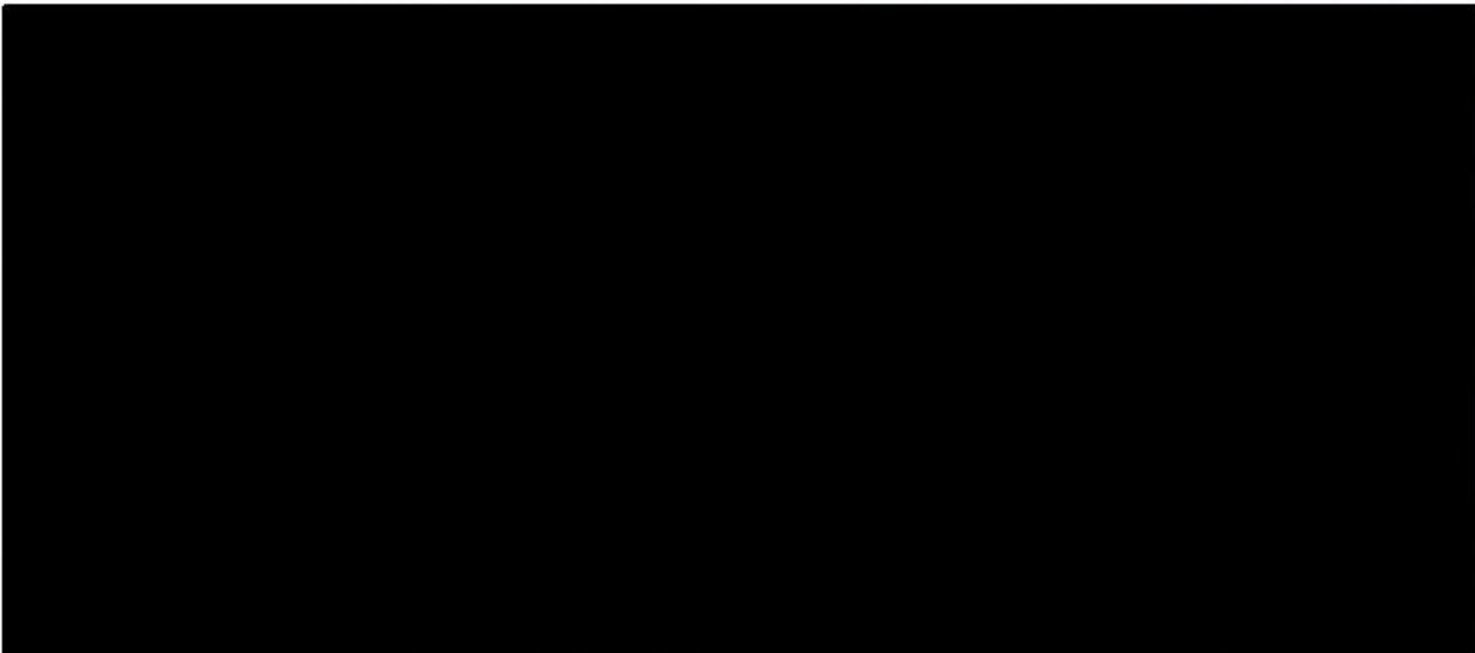

I think uPVC double glazing will be of benefit to the building as they will not rot and so hold

damp on to the brickwork and mortar. There will be considerably less maintenance. Which will save money which could be used with regard to other areas of maintenance with regard to the building.
