Good afternoon Sally.

I have had a look at this application, and although the proposed filling station will need to be issued with a permit (from us) in principle I have no objections.  
We have no adverse comment to make in relation to Air quality nor Contaminated Land.

I have looked at the attached documents in the planning platform but could not really see anything relating to the displays (petrol price column), lighting (apart from the look of the poles) or areas that would be illuminated and potential effect (direct or indirect) light reflection toward the residential part of the area (forest end) it may be that nothing would be of concern, but currently I am unsure. It may be worth having the illumination drawing to endure it is kept within the boundaries.

The Air and water pump, from experience are noisier than most of the activities being done on a petrol forecourt and can be activated and used 24 hours a day by customers. From the simple drawing provided, I could not make out if some sort of acoustic barrier will be built to minimise noise impact from such equipment.

I would be happy if conditions could be imposed (for the time being) until the noise from the water/air pump and illimination have been provided.

Asda, probably have these details already and should be easy to sort out.

once this has been addressed, no adverse comment would be given for the development of the petrol filling station.

I hope this helps

Kind regards

Laurent
