Dear Mrs Mulley,

**FORMER WORKS SITE AT 59-61 WEST STREET HAVANT
CONTAMINATED LAND DESK STUDY AND PRELIMINARY RISK ASSESSMENT**

Further to your instruction, we have carried out a site walkover visit and conducted desk study research to facilitate a preliminary contaminated land risk assessment based upon the proposed redevelopment of the site for residential purposes.

Development Proposals

It is understood that consideration is being given to the redevelopment of the site for residential purposes although no proposals have been currently formulated. It is therefore assumed that there would be likely to be a mix of residential types including houses with private domestic gardens.

Regulatory Framework

Part IIA of the Environmental Protection Act 1990, which was inserted into that Act by Section 57 of the Environment Act 1995, provides a regulatory regime for the identification and remediation of contaminated land. The determination of contaminated sites is based on a "suitable for use" approach which involves investigating the risks posed by contaminated land by making risk-based decisions. This risk assessment is carried out on the basis of establishing one or more "pollution linkages"; a pollution linkage requires a source of contamination, a sensitive target or receptor that is at risk from the contamination and a pathway by which the contamination can travel from the source to the target.

Current guidance to Local Planning Authorities (LPAs)¹ also indicates the need for a risk assessment and requires that where development is proposed on land that may be affected by contamination, a risk assessment should be carried out for consideration by the LPA before the planning application is determined. Where unacceptable risks are identified, proposals should then be formulated to address these risks as part of the development process.

This letter presents the findings of a limited desk study and preliminary contaminated land risk assessment. This work has been carried out to determine the potential requirement for further investigation work in order to facilitate and appropriate assessment of the ground related risks posed by this site and to ensure the adequate and appropriate protection of identified potentially sensitive receptors.

¹ Planning Policy Statement 23 (2004) *Planning and Pollution Control* HMSO

Site Description

The site is sensibly level with maximum dimensions of approximately 70 m by 50 m and essentially devoid of established vegetation other than localised weeds, with the site being covered by the extent of predominantly tarmac hard standing, buildings and an area of recently cleared hard standing within the central eastern part of the site. More details on the existing buildings and areas of hard standing, with particular reference to issues of potential contaminated land concern, are indicated on the enclosed site walkover survey plan.

The main issues of significance are;

- Underground fuel tank and dispensing pump;
- poorly controlled storage of oils, solvents and varnishes;
- above ground elevated single skin oil / fuel tank;
- assumed likely former vehicle workshops; and
- above ground oil tank.

The northern boundary to the site is formed by West Street, which provides vehicular access to the site. The southern boundary to the site is formed by the extent of further commercial premises that form part of a commercial estate called 'The Tanneries', with the eastern site boundary formed by an area of hard surfaced car parking associated with a residential development to the west of the site. Directly adjacent to the site to the west is Brockhampton Springs, which comprises an area of open soft landscaping with lakes and water courses, which are all managed as part of the office and works complex for Portsmouth Water located a short distance to the west of the site.

Map Based Site History

The history of the site has been researched by reference to historical Ordnance Survey (OS) maps and information obtained from the Havant Springs Heritage Centre, Local Studies Library and anecdotal information.

The earliest map studied dates from 1867 and indicates that by that time the site was developed through the construction of a range of assumed residential and light industrial / commercial buildings, within a predominantly residential setting. By that time the area to the west of the site is shown to have been occupied by a series of sluice controlled water courses and a water reservoir, with a water works beyond to the west. One of these sluice controlled water courses is shown to have formed the western boundary to the site at that time. A 'Washing Factory' shown to have been located approximately 100 m to the southwest of the site at that time, with open fields and an infants school located within the intervening land.

The next available map studied dates from 1897 and indicates that the town of Havant to have continued to develop and expand. By that time the site is shown to have been extensively redeveloped and labelled as a 'Parchment Works', whilst the former 'Washing Factory' to the southwest is shown to have been redeveloped as a 'Chamois Leather Works'.

The next available map studied dates from 1909 and indicates that the site and the immediate surroundings are shown to have remained essentially unchanged, although by the date of the next available map studied, dating from 1932, the site surroundings are shown to have been extensively developed: The former open fields and the 'Chamois Leather Works' are shown to have been extensively redeveloped as a 'Leather Works' with numerous large scale modern industrial buildings replacing the various smaller buildings formerly at this site. The site itself is shown to have been subject to a number of minor alterations and extensions, with a substantial circular structure, possibly an above ground tank, shown to have been located immediately to the south of the southern site boundary.

Subsequent maps studied indicate the site to have remained essentially unchanged although by 1969 it is shown to have been cleared of a number of the smaller buildings and to have been labelled as a 'Builders Yard'. The site to the southwest is shown to have continued to have been in use as a leather works / tannery until between 1969 and 1973.

By 1973 the site to the south is shown to have been divided into a series of light industrial units (referred to as 'The Tanneries') which are shown to have been in use as engineering workshops, a sheet metal works, and various warehouses. Subsequent maps dating to the present day indicate that the site and surroundings have remained essentially unchanged to the present day.

Other Information

It is understood that West Street marks the line of the old Roman road from Chichester to Wickham and that due to the purity of the water within the various springs the area has long been a centre for the manufacture of parchment. The manufacture of parchment requires the processing of animals and the treatment of their skins through a combination of mechanical separation of the layers of skin and chemical processes including the use of lime based alkalis, degreasers and boiling water to render the useable parts suitable for parchment making. In addition to the processing of parchments, the by-products of the skin processing resulted in various additional industries including tanneries to process the skins that were not suitable for parchment manufacture but were eminently suitable for uses such as glove making. It is assumed that the animal carcasses were sold off site to other markets.

The site is known to have been occupied by the Stents Glove Making Factory from 1916 although it was in use as a parchments works before then. Information obtained from The Springs Heritage Centre included details of the sales particulars from the auction of the former glove factory during the early 1960s. These details include a site plan showing the details of the uses of the various buildings present on the site and the adjoining site to the southwest which formed part of the same premises at the time of the auction. A copy of these plans are enclosed

Details of the builders yard usage have not been obtained, although the site is understood to have been recently used by 'Henry Jones (Joinery) Limited'. Additional research has indicated that in 2008 this company at this site was served an Improvement Notice by the Health and Safety Executive (HSE) with regards to the Control Of Substances Hazardous to Health (COSHH) relating to wood dust, glues, lacquers and finishes. This improvement notice would suggest that the site has a significant recent history of poor management, use, storage and disposal of potentially significant contaminants.

The Geological Survey map of the area indicates the site to be underlain by the Upper Chalk at the boundary between these soils and the overlying clay soils of the Lambeth Group. The Chalk is indicated by the Environment Agency to be classified as a Principal Bedrock Aquifer and the site is shown to be located within a Source Protection Zone 1 associated with various abstractions operated by Portsmouth Water for public supply.

Informal discussions with Portsmouth Water indicate that the Brockhampton Springs comprise a network of underground springs where groundwater from the catchment area of Horndean emerge under pressure from the confinement of the overlying clay soils. There are a series of springs within the immediate vicinity of the site that are piped underground towards the pumping station at the western end of the Water Works for treatment and onward distribution to homes and businesses. It is understood that these springs provide a significant proportion of the potable water supply for Portsmouth and are an extremely sensitive resource. A copy of plans provided by Portsmouth Water that indicate the locations of the various abstraction points that form the Brockhampton Springs abstraction are enclosed.

Information provided by the Environment Agency does not indicate the presence of any historical or active landfill sites in the vicinity of the site and does not indicate the presence of any potentially

contaminative land uses such as waste processing sites, pollution incidents within the vicinity of the site.

Information provided by the Hampshire Trading Standards indicates that the underground petrol storage tank on site was installed in 1964 slurry filled and decommissioned in 1994. The tank is shown to have passed pressure testing and there are no records of any leakages. A copy of information provided by the Hampshire Trading Standards Petroleum Licensing Officer for the site is enclosed.

Information provided by the Health protection Agency and British Geological Survey indicates that the site is located within an area where between 3% and 5% of homes may be affected by radon, such that basic radon protection measures are required to mitigate the potential ingress of radon gas into new buildings.

Conceptual Site Model and Preliminary Risk Assessment

On the basis of the information obtained as part of this desk study it is considered that there are a considerable number of potential sources of ground contamination by virtue of the industrial history of the site including significantly potentially contaminative activities such as fuel storage, animal processing, tannery use and the potentially poor use and storage of solvents. Furthermore the site is situated within an extremely sensitive environmental setting.

In view of the presence of numerous former sluice controlled water courses that are now at least partially culverted, groundwater is likely to be extremely shallow and is anticipated to be present within approximately 1 m of the ground level.

Due to the potentially complex interactions and the significance of the near surface ground conditions and the high degree of uncertainty necessary at this stage, it is not considered appropriate to present a detailed schematic cross section of the site to summarize the conceptual site model at this site on the basis of the information available to date. Detailed physical investigation of the site is considered necessary to more robustly assess the ground conditions beneath this site. In accordance with the guidelines provided by CIRIA², however, the information obtained from the desk study research may be used to present a preliminary risk assessment to identify the potential for pollution linkages to be formed through identifying the presence of the three constituent parts of a pollution linkage;

Potentially Sensitive Receptors

The proposed redevelopment will introduce new potentially sensitive receptors in the form of new residents of the proposed development, site workers associated with the proposed construction and future maintenance workers.

The groundwater at this site is likely to be very shallow and is considered to be particularly sensitive as it provides a source for the abstraction of the Portsmouth Water potable supply for much of Portsmouth.

Sources of Contamination

The desk study research has indicated that the site has a long history of use by a range of particularly contaminative activities including a parchment works, a tannery, a glove factory, fuel storage, carpentry workshops using solvents and oils and a builder's yard. There is a wide range of significant potential contaminants associated with these uses, many of which are persistent in the environment and particularly hazardous to health. There are also indications of surficial contamination associated with above ground tanks and poorly controlled storage of oils and solvents.

² Rudland, DJ, Lancefield, RM and Mayell, PN (2001) *Contaminated land risk assessment. A guide to good practice.* CIRIA Pub C552

Contamination Pathways

Whilst the site remains in its present state, there is a limited potential for ground contamination to impact upon end users, by virtue of the covering with hard standing or the extent of buildings, although there may be a potential for the formation of soil gases that could ingress into building and confined spaces.

The coverage of the site by hard standing and buildings will also mitigate the potential for near surface ground contaminants to impact upon the shallow ground water through the restriction of percolation, although there is a potential risk of ground water contamination due to the incomplete cessation of storage of potential contaminants.

Any construction works at this site will at least temporarily disrupt the existing hard coverage of the site and expose site workers to any near ground contamination. Any such works will also increase the risk of percolation mobilizing and contaminants and impacting upon the ground water. Should residential redevelopment be proposed with areas of soft landscaping and private domestic gardens, a permanent removal of hard standing will create significant pathways for end users and groundwater to be affected by any ground contamination.

It is perhaps interesting to note that the routine monitoring that is understood to be carried out by Portsmouth Water is not understood to have indicated concentrations of concern of an assumed wide range of potential ground contaminants, although details have not been provided of the extent and scope of this routine monitoring at Brockhampton Springs.

Conclusions and Recommendations

It is considered essential that effectively targeted ground investigation works are carried out in order to assess the site in more detail and facilitate the formulation of an appropriate conceptual site model and more robust preliminary risk assessment. Prior to carrying out any intrusive investigations however, detailed consultations should be held with Havant Borough Council Contaminated Land Team, the Environment Agency and Portsmouth Water in view of both the potentially contaminative history of the site and its extremely sensitive environmental setting.

We would be pleased to assist you further with this site and would be able to enter into preliminary discussions with the regulatory authorities on your behalf. We would however note that, in the light of the findings of this desk study, extensive ground investigation works are likely to be required to facilitate a robust assessment of this site with regards to ground contamination.

It should be noted that regardless of any plans to redevelop the site, there is a potential environmental liability associated with ownership of the site in its current condition. It would therefore be prudent to resolve the poor storage of waste solvents and oils, remove relic above ground tanks and carry out at least a limited ground investigation to establish baseline conditions at the present time.

We trust that this letter provides sufficient information for your needs at present, although please do not hesitate to contact me should you have any queries or questions or wish to discuss any of the issues raised.

Yours sincerely
Wilson Bailey Partnership

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.

In the attached datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Hampshire & Isle Of Wight Published 1867

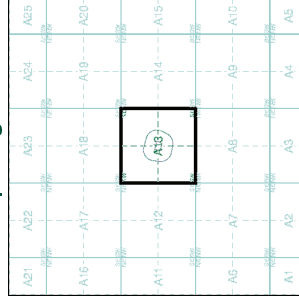

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the Ordnance Survey archives in Southampton. The maps were first published in 1867 and were based on the Cassini Projection. The published date given below is often some years later than the surveyed date. Before 1938 all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Map Name(s) and Date(s)

Additional SIMs

Published 1953

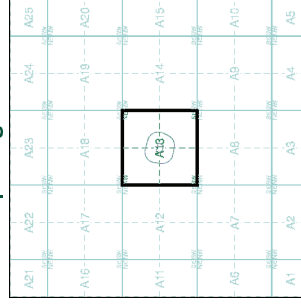

Source map scale - 1:2,500

The SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') are further editions of mapping which were produced and published from 1947 to 1994, and contain detailed information on buildings, roads and land use. These maps were produced at both 1:2,500 and 1:1,250 scales.

Ordnance Survey Plan

Published 1961 - 1969

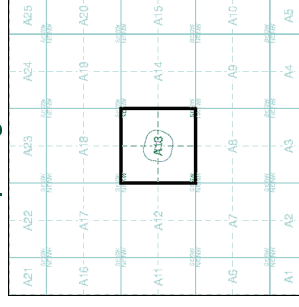

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the OS archives for England, Wales and Scotland in the 1940s and 1950s. The maps were digitised and published by OS in 1961 and 1969. The whole of Great Britain was covered by the OS National Grid by 1969. The published date given below is often some years later than the surveyed date. Before 1938 all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Supply of Unpublished Survey Information

Published 1973

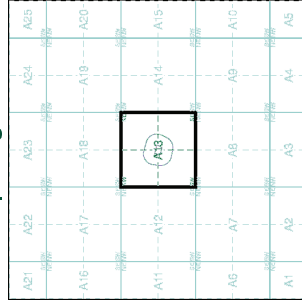

Source map scale - 1:1,250

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a 'work in progress' plan, as they were not intended to be published. These maps were produced at both 1:2,500 and 1:1,250 scales.

Large-Scale National Grid Data

Published 1993

Source map scale - 1:1,250

Large Scale National Grid Data: superseded SIM cards (Ordnance Survey's Survey Information on Microfilm) in 1992, and continued to be produced until 1999. These maps were produced from original data and provide detailed information on houses and other built features, as well as topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Large-Scale National Grid Data

Published 1996 - 1997

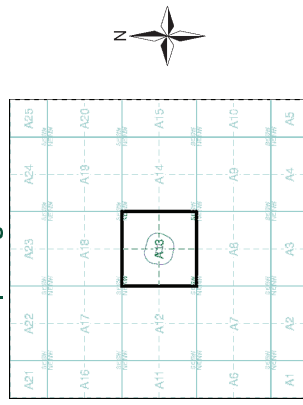

Source map scale - 1:1,250

Large Scale National Grid Data: superseded SIM cards (Ordnance Survey's Survey of Great Britain) in 1992, and replaced by the original maps produced in 1999. The maps were produced from aerial photography and provide detailed information on houses and other built-up areas, topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.
