

Extract from REUK.co.uk website

Savonius wind turbines can and are used in electricity generation - for example see our article on the [Envirotek V20 VAWT](#) generator - with the benefit that they continue to generate electricity in the strongest winds without being damaged, **they are very quiet**, and they are relatively easy to make. Savonius turbines do not scale well to kW sizes, however they are useful for small scale domestic electricity generation - especially in locations with strong turbulent winds. Click here to view our [free VAWT wind turbine plans](#) to find out how to make your own Savonius wind turbine generator.
