Appendix 15.11 – Desk Study Information	

Legend for UK BAP habitats

BAP Broad Habitats

AR		Rivers and streams
AS		Standing open water and canals
BR		Bracken
CR		Arable and horticulture
EM		Fen, marsh and swamp
GA		Acid grassland
GC		Calcareous grassland
GI		Improved grassland
GN		Neutral grassland
HE		Dwarf shrub heath
IR		Inshore supralittoral rock
IS		Inshore supralittoral sediment
LF		Boundary and linear features
LR		Littoral rock
LS		Littoral sediment
RE		Inland rock
SR		Supralittoral rock
SS		Supralittoral sediment
UR		Built-up areas and gardens
WB		Broadleaved woodland
WC		Coniferous woodland

Non-BAP Habitats

UH		Unknown habitat
----	---	-----------------

BAP Priority Habitats

	Coastal Saltmarsh
	Coastal Sand Dunes
	Coastal Vegetated Shingle
	Coastal and Floodplain Grazing Marsh
	Intertidal Mudflats
	Lowland Beech and Yew Woodland
	Lowland Calcareous Grassland
	Lowland Dry Acid Grassland
	Lowland Fens
	Lowland Heathland
	Lowland Meadows
	Lowland Mixed Deciduous Woodland
	Maritime Cliff and Slopes
	Purple Moor Grass and Rush Pastures
	Reedbeds
	Saline Lagoons
	Seagrass Beds
	Wet Woodland
	Wood-Pasture and Parkland

Hampshire Biodiversity
Information Centre

**BAP Priority Habitat Information
within 2 km of Dunsbury Hill
Farm (SU6993 0914) based on
Hampshire County Council's
habitat/land use mapping**

(see explanatory note for details of
the origin and accuracy of this data)

Some Habitats may overlap.

Criteria for selecting Sites of Importance for Nature Conservation in Hampshire

The criteria below define those sites which are considered to be of particular importance for nature conservation within Hampshire. These sites are in addition to the statutorily designated sites and are referred to as Sites of Importance for Nature Conservation (SINCs).

Woodland

- 1A** Ancient¹ semi-natural² woodlands.
- 1B** Other woodland where there is a significant element of ancient semi-natural woodland surviving.
- 1C** Other semi-natural woodland if;
 - (ii)** they comprise important community types of restricted distribution in the County, such as yew woods and alder swamp woods
- 1D** Pasture woodland and wooded commons, not included in any of the above, which are of considerable biological and historical interest.

¹ *Ancient - refers to woodlands which have developed particular ecological characteristics as a result of their long continuity. Those identified to date which are over 2ha are included on the Hampshire Inventory of Ancient Woodlands (Provisional).*

² *Semi-natural - modified types of vegetation in which the dominant and constant species are accepted natives to Britain and that locality, and the structure of the community conforms to the range of natural vegetation types.*

Neutral/acid/calcareous grassland

- 2A** Agriculturally unimproved grasslands³
- 2B** Semi-improved grasslands which retain a significant element of unimproved grassland.
- 2D** Grasslands which have become impoverished through inappropriate management but which retain sufficient elements of relic unimproved grassland to enable recovery.

³ *Agriculturally unimproved grassland - grassland that is composed of a mixed assemblage of indigenous species in essentially semi-natural communities which has been allowed to develop without the major use of herbicides or inorganic fertilisers.*

Heathland

- 3A** Areas of heathland vegetation; including matrices of dwarf shrub, acid grassland, valley mires and scrub.
- 3B** Areas of heathland which are afforested or have succeeded to woodland if;
 - (i)** they retain significant remnants of heathland vegetation which would enable their recovery, or
 - (ii)** they are contiguous with, or form an integral part of an open area of heathland,

Coastal habitats

- 4A** Semi-natural coastal and estuarine habitats, including saltmarsh, intertidal mudflats, sand dunes, shingle, brackish ponds, grazing marsh and maritime grasslands.

Wetlands

- 5A** Areas of open freshwater (eg. lakes, ponds, canals, rivers, streams and ditches) which support outstanding assemblages of floating/submerged/ emergent plant species, invertebrates, birds or amphibians.
- 5B** Fens, flushes, seepages, springs, inundation grasslands etc. that support a flora and fauna characteristic of unimproved and waterlogged (seasonal or permanent) conditions.

Species

- 6A** Sites which support one or more notable species⁴.
- 6B** Sites which regularly support a significant population of a species which has a restricted distribution or has substantially declined in population or range. Such sites may be used seasonally or for only one part of a species life-cycle.
- 6C** Sites which support an outstanding assemblage of species.

⁴ *Notable species include Red Data Book species, Nationally Scarce species, species covered under Schedules 1,5 and 8 of the Wildlife & Countryside Act 1981, Annex 1 of the EC Bird Directive 79/409 and Annex II & 1V of the EC Directive 92/43/EEC 'The Habitats Directive', and those covered by the Bern, Bonn and Ramsar Conventions. Notable species will also include species which are considered 'County Rare' or 'County Scarce'. County Rare = those species recorded in 1% or less tetrads in Hampshire or either of the two vice-counties (11 & 12) separately. County Scarce = 4% or less tetrads.*

Social value

- 7A** Sites of nature conservation interest which occur in areas otherwise deficient in such interest, and/or are known to be of particularly high value to local communities e.g. community wildlife sites.

Sites selected under this criteria will be rigorously confined to those which, if lost, would result in a considerable and demonstrable loss to the local community which would be very difficult/impossible to replace. Because of the widespread distribution of sites of nature conservation interest in Hampshire, and the high threshold used to define critical importance, only a limited number of sites are likely to meet this criteria.

Geology and geomorphology

- 8A** Sites which have been designated as Regionally Important Geological/Geomorphological Sites (RIGS)

Regionally Important Geological/Geomorphological Sites are sites of regional importance excluding SSSIs. RIGS are analogous to biological non-statutory sites.

Hampshire Biodiversity
Information Centre

Non-statutory designated sites within 2km of Dunsbury Hill Farm (SU 6993 0914):

- Sites of Importance for Nature Conservation (SINC)
(Labelled 1 - 51)
- Ancient Woodlands*

Protected and Notable Species Records

Search Area: **within 1km of Dunsbury Hill Farm**

Date: **13/08/2010**

HBIC has its own extensive database of habitat and higher plant data for the County. In addition, HBIC hold copies of datasets belonging to partner organisations. Through data exchange agreements with these organisations HBIC is provided with regular database updates and can supply species information on their behalf. HBIC currently holds copies of the following datasets:

- Botanical Society of the British Isles' (BSBI) vascular plant database for Hampshire
- Butterfly Conservation's butterfly and moth database for Hampshire
- Hampshire Ornithological Society (HOS) bird records
- Hampshire Bat Group (HBG) Records of bat roost visits and sightings
- Data administered by the Hampshire Wildlife Trust (HWT) on behalf of the species recording groups below:
 - Hampshire Amphibian and Reptile Group (HARG)
 - Hampshire Invertebrate Network (HNIC)
 - Hampshire Mammal Group (HMG) (excluding records for bats and badgers)
- UK Bees, Wasps and Ants Recording Society (BWARS) trial dataset records for Hampshire

It is important that these species recording groups (where relevant to the data provided) are acknowledged in any document produced by the data requester where data is incorporated into the document, as a matter of course.

The following are Protected and notable species records from the above datasets within the search area recorded in the last 15 years:

Taxon Name	Common Name	Status	Grid Ref.	Location	First Year	Last Year	No. of Records	Max Count

* Indicates some of these records are unconfirmed

Confidential records

HBIC holds a small number of records that are to be treated as confidential. Confidentiality can be for a variety of reasons and may relate to a whole site or only to specific species. These records may be withheld or released depending on the nature of the data request and in accordance with the Environmental Information Regulations 2004.

Sensitive species

sharing information about Hampshire's wildlife

The Hampshire Biodiversity Information Centre Partnership includes local authorities, government agencies, wildlife charities and biological recording groups.

A small number of species are considered as sensitive by the relevant specialist species recording groups and will be indicated as such on all lists. Species may be considered sensitive for a variety of reasons. Location details for these records will not be disclosed unless the relevant species recording group has given their permission. Grid references will be altered to give a less precise position. Contact HBIC if further information is needed on these records.

Common species

The following species are included in the list because they have a national status. However, they are relatively common in Hampshire and are not used in the identification of SINC's which meet Section 6 of the Hampshire SINC criteria:

- *Hyacinthoides non-scripta* (Bluebell)

Records of species such as the Nationally Rare Box (*Buscus sempervirens*) may not appear on the list as there may be many records but their provenance is not known.

Further notes

- The location names, where shown, are the originals given by the recorders and may not match any formal name for the location or other colloquial names by which the location may also be known.
- The grid references, where shown, are the originals given by the recorders and may indicate the specific location of the species, a central grid reference representing a larger survey area, or a grid square.
- Where species have been deemed as 'sensitive' by the relevant specialist species recording group the location name will not be shown and the grid reference will have been altered to give a less precise position specified by the species recording group.
- Many of the records have been supplied by specialist species recording groups. Whilst every reasonable effort is made to validate information supplied to the Hampshire Biodiversity Information Centre the accuracy or comprehensiveness of this information cannot be guaranteed.
- Records do not necessarily represent evidence of breeding at a site; please contact HBIC if further details are required for any of these records.
- Whilst a species may have been recorded at a site, this does not indicate that the species is still present. Equally, the absence of a species from a site does not signify that it is absent, only that it has not been recorded, that the site has not been surveyed for this species, or that HBIC has not been informed of its presence.
- Quantities of '0' (zero) indicate that the species was 'present' but the number of individuals seen was not recorded. Negative quantities correspond to the DAFOR scale (plus very rare and 'locally' criteria) as follows:
 - -1 = Dominant (DAFOR)
 - -2 = Abundant (DAFOR)
 - -3 = Frequent (DAFOR)
 - -4 = Occasional (DAFOR)

sharing information about Hampshire's wildlife

The Hampshire Biodiversity Information Centre Partnership includes local authorities, government agencies, wildlife charities and biological recording groups.

- -5 = Rare (DAFOR)
- -6 = Very Rare
- -21 = Locally Dominant
- -22 = Locally Abundant
- -23 = Locally Frequent
- Negative quantities of ‘-7’ (minus seven) indicates that the species was ‘not found’. These records are not included in protected and notable species lists.
- Max_Count values of ‘0’ (zero) indicate that none of the records had a positive quantity count and hence the highest count numerical value was ‘0’ (indicating ‘present’). Max_Count values of blank indicate that none of the records had a numerical count value and instead they all had frequency values (e.g. using the DAFOR scale).

Protected and Notable Bat Species Records

Search Area: **within 5km of Dunsbury Hill Farm**

Date: **13/08/2010**

HBIC has its own extensive database of habitat and higher plant data for the County. In addition, HBIC hold copies of datasets belonging to partner organisations. Through data exchange agreements with these organisations HBIC is provided with regular database updates and can supply species information on their behalf. HBIC currently holds copies of the following datasets:

- Botanical Society of the British Isles' (BSBI) vascular plant database for Hampshire
- Butterfly Conservation's butterfly and moth database for Hampshire
- Hampshire Ornithological Society (HOS) bird records
- Hampshire Bat Group (HBG) Records of bat roost visits and sightings
- Data administered by the Hampshire Wildlife Trust (HWT) on behalf of the species recording groups below:
 - Hampshire Amphibian and Reptile Group (HARG)
 - Hampshire Invertebrate Network (HNIC)
 - Hampshire Mammal Group (HMG) (excluding records for bats and badgers)
- UK Bees, Wasps and Ants Recording Society (BWARS) trial dataset records for Hampshire

It is important that these species recording groups (where relevant to the data provided) are acknowledged in any document produced by the data requester where data is incorporated into the document, as a matter of course.

The following are Protected and notable bat species records from the above datasets within the search area recorded in the last 15 years:

* Indicates some of these records are unconfirmed

Confidential records

HBIC holds a small number of records that are to be treated as confidential. Confidentiality can be for a variety of reasons and may relate to a whole site or only to specific species. These records may be withheld or released depending on the nature of the data request and in accordance with the Environmental Information Regulations 2004.

Sensitive species

A small number of species are considered as sensitive by the relevant specialist species recording groups and will be indicated as such on all lists. Species may be considered sensitive for a variety of reasons. Location details for these records will not be disclosed unless the relevant species recording group has given their permission. Grid references will be altered to give a less precise position. Contact HBIC if further information is needed on these records.

Common species

The following species are included in the list because they have a national status. However, they are relatively common in Hampshire and are not used in the identification of SINC's which meet Section 6 of the Hampshire SINC criteria:

- *Hyacinthoides non-scripta* (Bluebell)

Records of species such as the Nationally Rare Box (*Buscus sempervirens*) may not appear on the list as there may be many records but their provenance is not known.

Further notes

- The location names, where shown, are the originals given by the recorders and may not match any formal name for the location or other colloquial names by which the location may also be known.
- The grid references, where shown, are the originals given by the recorders and may indicate the specific location of the species, a central grid reference representing a larger survey area, or a grid square.
- Where species have been deemed as 'sensitive' by the relevant specialist species recording group the location name will not be shown and the grid reference will have been altered to give a less precise position specified by the species recording group.
- Many of the records have been supplied by specialist species recording groups. Whilst every reasonable effort is made to validate information supplied to the Hampshire Biodiversity Information Centre the accuracy or comprehensiveness of this information cannot be guaranteed.
- Records do not necessarily represent evidence of breeding at a site; please contact HBIC if further details are required for any of these records.

sharing information about Hampshire's wildlife

The Hampshire Biodiversity Information Centre Partnership includes local authorities, government agencies, wildlife charities and biological recording groups.

- Whilst a species may have been recorded at a site, this does not indicate that the species is still present. Equally, the absence of a species from a site does not signify that it is absent, only that it has not been recorded, that the site has not been surveyed for this species, or that HBIC has not been informed of its presence.
- Quantities of '0' (zero) indicate that the species was 'present' but the number of individuals seen was not recorded. Negative quantities correspond to the DAFOR scale (plus very rare and 'locally' criteria) as follows:
 - -1 = Dominant (DAFOR)
 - -2 = Abundant (DAFOR)
 - -3 = Frequent (DAFOR)
 - -4 = Occasional (DAFOR)
 - -5 = Rare (DAFOR)
 - -6 = Very Rare
 - -21 = Locally Dominant
 - -22 = Locally Abundant
 - -23 = Locally Frequent
- Negative quantities of '-7' (minus seven) indicates that the species was 'not found'. These records are not included in protected and notable species lists.
- Max_Count values of '0' (zero) indicate that none of the records had a positive quantity count and hence the highest count numerical value was '0' (indicating 'present'). Max_Count values of blank indicate that none of the records had a numerical count value and instead they all had frequency values (e.g. using the DAFOR scale).
