Dear Sir,

Please find enclosed one HF Choke Balun Standard model, which I bought from you last year, under receipt number 105994.

I have only just managed to steer myself clear to fit this choke balun, but having fitted it NOT ONE station was able to hear my signal, although signals were of good quality on reception. The rig tuned up perfectly but no RF seemed to be getting out. On removing the Balun and working normally on the W3DZZ, I was able to work stations normally again.

I have just fitted the HF Choke Balun Yagi model to my Elan beam, which I bought from you at the same time and that one works perfectly.

Would appreciate you running checks on this Balun as I was keen to try and cure some TVI that I was experiencing on 21 MHZ.

At no time during the check being made on the Balun, did the power exceed 100W on the FT101E that I use, so could not be excessive power that has given this fault.

Look forward to hearing from you in due course.

Yours faithfully,

Not relevant at all

Mick Puttick G3LIK.
