Dear summerhouse owner,

Thank you for choosing a Luoman log cabin! Your cabin was manufactured with the greatest care and expertise from good quality, well-dried, fine-grained spruce at our modern plant in Finland.

The material we use is purely natural, and being solid wood is vigorous and active. Despite technical drying methods it is, nonetheless, **impossible to completely prevent some degree of warping, the formation of resin and cracks, especially on the outside surfaces.** The varying knot formations are also typical of Spruce. These variations are all part of the beauty of wood.

Any rough edges and unevenness caused by the planer etc. on the back of the profiled planks and floorboards is due to production techniques and **and is not actually a defect in the quality.**

The timber we use (which is, of course, from sustainable forests) is absolutely untreated, except for the impregnated parts. That means that it will turn greyish over the years, something which you might choose to avoid by applying a coat of stain (blue-stain inhibitor is recommended) or paint – please, take notice of the recommendations of the varnish or paint manufacturer. It is not advisable to paint the wall timbers before assembling them – this is best done when the cabin has been erected and the weather is fine. However, if you wish to paint odd parts in different colours, this should be done before the cabin is assembled.

Before starting the erection of the cabin, check that there are as many parts as mentioned in the part list.

Incidentally: adequate ventilation and avoiding waterlogging are still the best ways of protecting wood against rot.

We wish you every success and lots of fun with the construction of your log cabin . . .
Now you can get started...

Dear Customer,

in a case of reclamation, please inform your dealer about the specific guarantee number of your cabin. You can find this number on the package and on the door or the door frame, marked by the hinge in the upper third part of the door or the frame. Unfortunately, without this guarantee number we cannot handle your reclamation!
