

Re: Planning Proposal for two developments at Emsworth House Close

- APP/24/00245
- APP/24/00232

To the planning officer

I strongly object to both proposed developments referenced above, for the following reasons.

The close is home to many older residents who often require emergency services. The existing congestion from parked vehicles is already a challenge for both the ambulance and fire services on a regular basis. This would be particularly concerning during the proposed construction phase and could continue to be an issue if the application is successful, and the development is completed.

Additionally, a number of residents in the close rely on mobility scooters or aids, the presence of numerous vehicles and construction workers during the development process could compromise the safety of these residents, which I do not feel has been considered. Along with excessive noise and disruption from construction which will affect the wellbeing of Emsworth House Close residents.

Furthermore, the current parking situation is already a significant issue, and it is likely to worsen not only during the construction phase but also after completion if the planning proposal is approved. Many of the residents have to park in alternative roads already.

Yours sincerely
