Dear Sir/Madam

**Application Number App/21/01/01351 Saltmarsh Lane**

Regarding the above application I have the following objections.

1. The proposed site, marshland, drains into a stream [REDACTED]  
[REDACTED] and when we have heavy rain thousands of gallons of water run for several days. What will happen with this water?
2. The access to the proposed site is only 8 meters wide and runs into Saltmarsh Lane. Surely not wide enough for the 200 cars and HGVs that will be using it..
3. During the summer tankers have to remove sewage from the island to the mainland as the sewage is inadequate for existing properties let alone more.
4. The bridge was built in 1956 when the population was 6000 and the number of vehicles using the bridge was approximately 1000 per day. Today the population is 17000 and in peak periods between 7am and 7pm approximately 28000 use the bridge. In 1956 was the bridge designed and constructed to take the volume of traffic seen today? Has the bridge had a recent safety survey carried out?

Please take these points into consideration
