

The tree in question is a mature eucalyptus in good health, however has had little maintenance carried out over the years. The tree at the base has pushed the wall over and is causing root issues along the pavement the owners of the tree very much like the tree but would like to carry out some maintenance to keep the size sensible the proposed works would be a height reduction of 3.5 metres and a lateral canopy spread reduction of 2.5 metres all work will be carried out in accordance with British standards.
