

10th July 2023

The Planning department
Havant Borough Council

Ref: 18 Spring Vale

The planning situation for this property is very distressing with ongoing uncertainty.

 we are opposed to the 'Approved plan' as any changes to the property that will increase the height of the walls will impact on the natural light level to our property. The impact of reduced light will not only result in a risk to our mental wellbeing but will also result in a higher need for artificial light which is likely to increase the chance of damp in our property (also a risk to our health) but also increase electricity use resulting in higher costs.

We are happy with the existing structure as it is currently built.

We feel the changes shown in the proposed plan would be satisfactory due to there being no changes to the current height of external walls below the dormers. However any changes to the property will result in further disruption to our daily routines which is likely to have a detrimental effect on our wellbeing, for example scaffolding encroaching into our property boundaries, increased traffic directly outside our property, damage to external grass verge and ongoing noise disruption.
