Your Ref. APP/20/00134

Dear Mrs T Pickup,

25 FEB 2020

We hope you can help us with our concern, I got in contact with your department last year and was told someone would come and see us but no one did. My wife and I have concern about a land drain that runs [REDACTED] to Copse Close drainage system via 1, Copse Close, Waterloooville PO7 5JS, [REDACTED]. The land drain [REDACTED] runs through the rear garden of 1 Copse Close through to the southern water drain in Copse Close roadway. We have worries that the build 1, Copse Close intend to do could cause us to have flooding problems if our drain becomes damaged or blocked, if it were damaged, 1 Copse Close would also experience flooding problems. We have noticed even more this year especially with the rain we have had these last few months. Living on a slope means we get a great deal of drainage off the golf course directly behind our garden. We have absolutely no objections at all to the build, but during the forthcoming building works, the drain line needs to be located and measures taken to avoid penetrating the pipe. The exact location of the land drain is not known, please rely on your searches and inquiries to establish a firm location. Look forward to hearing from you.
