CLADDING BROCHURE AND DESIGN

CAUTION: This email came from outside of the council - only open links and attachments that you're expecting.

Larch cladding, is our choice for its durability and natural beauty, it is known for its ability to withstand the elements and weather to a silver-grey patina.

Larch is naturally durable, meaning it can resist rot and decay, making it a long-lasting cladding option for us.

Larch is known for its ability to withstand the elements, weathering to a silver-grey colour over time.

Larch is often a more affordable alternative to other durable cladding materials like cedar, we will choose our larch supplier next year when we are ready to order and this will either be European, but most probably/hopefully British, sourced as locally as possible.

The cladding design will be, vertical, shadow gap, boards of 150mm and installed in its natural state, finally weathering to a silver-grey patina

Additional Resources we have researched:

- exteriortimber.co.uk: Information on UK larch cladding and its properties
- [Russwood](#): Information on Scottish larch cladding, including different profiles and finishes
- [Timber Decking and Cladding Association](#): Guidance on fixings for timber cladding
- [English Woodlands Timber](#): Product information sheet for Larch cladding.
- UK Timber Cladding have examples of what we are looking at

Kind regards,
