Tree Protection Statement

I will ensure that the Hawthorne tree on my property, which is protected by Tree Protection Order 1168, will not be harmed or damaged during the construction of a shed on my property.

I will ensure that all materials are stored and kept away from the tree, and that none of the work will impact the tree, its soil, or its root systems in any way. I will ensure that the erection of the shed is completed in a timely manner to minimise any potential stress on the tree.

The shed is planned to be situated far enough away from the tree, leaving it ample room to grow. The proposed shed is a small personal shed that will have a low impact on the surrounding environment.

Any parking or access to the site will be appropriately located away from the tree and will not affect it. Any machinery needed for the construction of the shed will also be positioned away from the tree.

No chemicals or concrete washout will be disposed of near the tree. Care will be taken to avoid damaging any branches or compacting the soil near the tree.

Trees will be monitored for 12 months post-completion for signs of stress or damage. This Tree Protection Statement demonstrates my commitment to preserving and protecting trees during the development.
