

Jonathan

Trust you are keeping well.

With the various disturbances due to Covid-19, I am not sure that the attached document reached you for review.

This is a revised version of the text to the MMP support document that takes on board your comments (I have not included a full set of the appendices as the files size is huge and there have been no changes to this part of the report).

We have amended the chemical thresholds in accordance with your comments and our discussions and have also adjusted the contamination testing regime, although as requested by the developer, this remains robust and provides safety and assurance that the ground worker and earthworks contractor that will be appointed in due course will be held under a strict level of scrutiny to ensure that we can all be confident of not only the chemical but the physical suitability and durability of imported soils.

As noted, the attached document is referenced as a MMP Support Document (rather than just being called an MMP) because it supports the MMP declaration to the EA and CLAIRE. This has been done and ratified – please let me know if you need a copy of the submission.

I would be grateful if you could please review the attached. This will be imminently submitted through the planning system together with a package of other information for other disciplines by the planning consultant, but I thought it might be useful to send a copy through directly.

Please come back to me with any questions or queries.

Regards

Dominic
