To whom it may concern

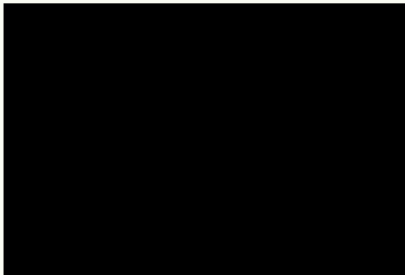

I have been asked by the owner of Hayling Garage to write a statement about the impact of the recently constructed metal building that has been constructed on their property as my property is located in the vicinity of the garage.

Firstly, I am pleased that the addition to the garage has been completed as I have noticed a decrease of noise due to the day to day work of the garage now being more enclosed.

Secondly, I have noticed that with the construction of this building it has allowed them to complete more work that would normal have to wait till a work bay was available through the day there by decrease the number of vehicles that customers park in the vicinity of the garage due to the fact that the reduced number of vehicles are able to now be parked off road on the premises

To summarise I find that this new structure has been nothing but a benefit for the area and I am pleased to see a local family run business doing well in the current financial climate where many businesses in the local area struggle to keep their doors open.

Regards
