Noise impact assessment - Aura House, 2a New Road, Havant.

We realise that the proximity of road & rail would force occupants to suffer noise pollution if they relied on opening windows for ventilation. Therefore we propose to mitigate the situation using a whole-house ventilation system that handles extraction plus fresh air supply through an energy efficient heat-exchange system. This provides ample fresh air (tempered and filtered) for occupants and the windows shall be of a fixed nature (except in means of escape situations). This also removes the requirement for trickle ventilation to achieve satisfactory air changes in habitable rooms.

We always try to work as closely with the LPA as possible and welcome suggestions and comments necessary to the application.
