Dear Mrs Miszewska

Re: Development at Oklahoma, 4 Long Copse Lane, Emsworth, PO10 7UL

Having reviewed the environmental reports attached to the planning application and the proposed mitigation in respect of the destruction of habitats I have the following concerns.

The reports are generic and at no point acknowledge specifically that the following fauna is present and that their environmental site will be destroyed.

Currently present

- Grass snakes
- Bats
- Slow worms
- Common newts
- Great newts
- Lizards
- Horned stag beetles

I'm more than happy to meet with your representative at the site to identify these animals and their hibernating habitats.

Please can you identify for me the report that shows the detail that these specifics have been addressed.

I have contacted the planning department, at the number detailed on the correspondence sent out for consultation, a number of times over the course of the consultation period and had understood from that someone who get back to me. However, I have received no response.

I require my correspondence to be included in the papers presented for the current review and also look forward to a response from yourselves.

Yours sincerely
