
I do feel that this should be refused. To say that the land is underused when you have just concreted or pebbled over it is ridiculous. This was always a nice garden and frankly too small a site to infill. (I thought that the Government had stopped all this infilling). We agreed a few years ago to a planning application for two bungalows at the back of the Crest (we live number 1 The Crest) and have regretted it ever since. Our lawn gets flooded every time it rains and this never happened before. The area where the bungalows were built was always very wet, according to a previous owner, and no soakaway has been provided. Hence this should not happen to the family living below number 8. There is nothing that can be done about ours so please make sure that it cannot happen to them. The front garden too has been cemented or pebbled over so that will increase the water table. There is a dropped kerb quite close to the A3 which is a little worrying.

Please think very seriously before you allow this to go ahead.

Janet & Paul Flynn,
1 The Crest
