Jamie,

I refer to the above application to crown lift to 4 metres and crown reduce by 2 metres T55 and T56.

I hope you do not mind but may I please request that, given the previous failures by Bellway to adhere strictly to planning conditions and to ensure that their contractors are made fully aware of the specific requirements/conditions, that if planning permission is granted Bellway are required to appoint a fully qualified tree surgeon to complete the work and a copy of Bellway's specific instruction is provided to you in advance of any work being completed.

I apologise if this request is out of line with normal procedures but by way of just one example, landscape contractors were seen last year using strimmers in areas where the Biodiversity report specifically stated that the grass should remain long to provide habitat for the reptiles. Bellway had failed to tell their contractors of the requirement and conditions but unfortunately the damage to the habitat was already done by the time residents saw the contractors. There are many other instances of failures to follow correct procedures.

Many thanks and kind regards.

Hope this email arrives as we have had a lot of email problems recently.

Gary Tester
