Planning Application Objections
REF: APP/17/00394

As there appears to be no revisions to this application, we wish our earlier letter of objections (7 May 2017), to still be considered.

We also wish the committee to consider where, on the extended property, the fire evacuation assembly point would be located. Bear in mind that the proposal extends, north to south, to fill the property boundaries.

In the unfortunate situation that an evacuation comes to pass, marshalling patients suffering restricted mental abilities to the rear of the property (east side), with no egress to the road side, seems a recipe for disaster. The prevailing wind from the west would make such an assembly point untenable due to smoke and heat danger. Using the west side (front of the property) would mean all residents and staff would have only one exit point, the main door. Have the fire service examined and approved evacuation procedures?

Yours sincerely,

D.W. & [REDACTED]
