

Maria

Further to our conversation this morning with you requesting more information on the application regarding pruning of sycamore at the above address

I can confirm reason for reduction is to reduce wind sail of tree in a heavily used target area due to tree

having and deeply decayed base in a bifurcated stem and evidence of polyporus squamosis

Therefore reducing potential likelihood of failure,ensuring my clients duty of care,and increasing longevity

of tree

Please contact me if you have any further queries
